Mathematical Economics Letters (MEL) considers high quality short communications (limited to six printed pages) in the innovative use of mathematical methods in economics and finance. We consider papers in all areas of economics and finance such as financial economics, public economics, international economics, monetary economics, among others. Very important results in pure mathematics will be also considered. We also welcome research announcements (research in progress) and editorials (limited to two printed pages) from very established scholars. The topics include (but are not limited to) Stochastic analysis, Optimal control theory, Optimization, Harmonic analysis, Fourier and wavelet analysis, Viscosity solutions to PDEs, Game theory, Applied probability, Numerical methods, Econometric methods

The journal is addressed to economists (instructors and students), financiers and mathematicians.

ISSN 2195-4615 · e-ISSN 2195-4623

All information regarding notes for contributors, subscriptions, Open Access, back volumes and orders is available online at www.degruyter.com/mel.
