

## Congress announcement

# LASER World of PHOTONICS

## DGLM Application Panel:

### Unmet Needs in Biophotonics and Laser Medicine

May 14, 2013; ICM International Congress Centre, Munich, Germany

DEUTSCHE GESELLSCHAFT  
FÜR LASERMEDIZIN e.V.

LASER World of PHOTONICS 

As part of the LASER World of PHOTONICS Congress and Exhibition, which will be held from 12–16 May 2013 at the International Congress Centre Munich, the *Deutsche Gesellschaft für Lasermedizin* (DGLM) e.V. is organizing an application panel on the topic “Unmet Needs in Biophotonics and Laser Medicine”.

The basic theme “unmet needs” describes unsatisfied demands in biophotonics and laser medicine and underlines the objective of this application panel, namely to consider conceptual and technical gaps in the application of photonics and lasers in medicine – not least from a health-economical point of view.

Starting out from state-of-the art techniques, the lectures describe the “ideal situation” and the steps which are necessary to achieve this situation. In doing so, “blank spaces” should become apparent.

In this way we hope to learn more about missing links in the entire solution chain and to identify possible concepts and means of resolution. We also would like to initiate a dialogue between participants and suppliers for

system integration and providers of optical components in order to realize technical implementation with the aim of overcoming the medical challenges of today and tomorrow.

So please mark the date. We are looking forward to your active participation and interesting discussions. Detailed information will come soon and can be found at: **[www.dglm.org](http://www.dglm.org)** or **<http://www.world-of-photonics.net/en/photonics-congress/structure/APPLICATIONPANELS>**.

With our best regards,

Dr. Carsten M. Philipp  
Chair, President of  
DGLM e.V.

Dr. Ronald Sroka  
Chair, Secretary General  
of DGLM e.V.
