Restoration of Buildings and Monuments

An International Journal

Bauinstandsetzen und Baudenkmalpflege

eine internationale Zeitschrift

Aims and Scope

Restoration of Buildings and Monuments (RBM), an international journal, publishes invited review articles, original papers, and short communications in the wide field of durability, maintenance and restoration of buildings, structures, and monuments. Contributions present recent results from original research and new experiences from practice. The wide field covered by this journal can be subdivided into six main areas:

- Studies of deteriorating mechanisms
- Preventive measures and durability design
- Assessment of the actual state
- Maintenance strategies
- Strengthening and rehabilitation
- Repair engineering and ecological impact

Papers are published in English or in German with summaries and keywords in both languages.

Subscription

Restoration of Buildings and Monuments (RBM) is published bimonthly by Aedificatio Publishers, Freiburg, Germany. The subscription rate for volume 20, 2014, containing six issues, is EUR 170,-- plus postage. You can subscribe via your bookstore or directly by e-mail: office@aedificat.de. The subscription can be cancelled with three-month term to the end of the year; otherwise it is extended by a further year. Individual issues published recently can be purchased for EUR 29,00 each. Volumes 1 to 19 will be available on CD soon. Restoration of Buildings and Monuments is available as hard copy (ISSN 1864-7251) or as electronic version (ISSN 1864 - 7022).

If you are interested, you may obtain a free sample copy by contacting the publishers:

Guidelines for authors on how to prepare and submit contributions

1. General Information

In the international journal Restoration of Buildings and Monuments invited review papers, original papers, and short communications are published.

Contributions, either original papers or short communications, can be submitted in English or in German. All contributions should contain new and unpublished results which are to be described as concisely as possible. Papers should not be over 16 pages long, while short communications should have a maximum of 6 pages.

Authors should submit their contribution as pdf document and in one of the following formats, namely, Frame Maker, Word or RTF to the publishers: office@aedificat.de.

If there is more than one author please indicate the author to whom correspondence shall be addressed (corresponding author). It will be helpful if you can provide us with the email address of the corresponding author.

Figures should not be incorporated within the text but should rather be submitted as separate files, if possible in TIF or EPS format. Reference to the figures must be made in the text and figure captions should be included so as to ensure their appropriate placement. Color prints should be included if absolutely necessary only and their reproduction requires the approval of the editor. Experimental results should be presented either as tables or in a graphical format, but not under both options.

Submitted papers will pass a critical and anonymous peer review process following which authors may be asked to revise their contributions accordingly.

Authors will receive 2 copies of the issue in which their contribution is published free of charge. These complimentary copies will be sent to the corresponding author. Reprints of individual contributions can be produced if ordered in advance.

2. Layout

In principle, no special fonts are required and formatting should be reduced to an absolute minimum. In particular, avoid the use of the space-bar and the tab key.

The first page should only present the title of the paper, names (with only the initials of the given names) and affiliation of the authors and an abstract (English and German in case the paper is written in German) covering the most important results. Not more than five keywords should be added.

3. Equations, Figures and Tables

Equations should be numbered consecutively with the numbers placed at the right edge of the page in brackets (e.g. (1)). Equations should be referred to in the text as eq. (1). Both tables and figures should also be numbered consecutively. In the text reference to tables and figures should be made as Table 1 and Fig. 1 respectively. Captions for tables should be placed above them while those for figures should be placed below.

Please avoid whenever possible colors to distinguish different lines in one figure. Use different symbols or solid lines, dashed lines, and dotted lines instead. Text in figures must be big enough to be readable after reproduction.

4. References

References are numbered consecutively following their appearance in the text. Numbers are given in square brackets (e.g. [1, 2] or [4-6]). The list of references is placed at the end of the manuscript under the heading References. Format for the references is as follows:

(1) for a paper published in a professional journal: author's name(s) with initials, the title of the paper (in italics), the title of the journal (the official abbreviation may be used), volume (bold), year of publication in brackets, followed by first and last page number (see [1] below);

(2) for papers published in Proceedings and other edited volumes: author's name(s) with initials, title of the contribution (in italics), first and last page number, title of the volume, editor(s) with initials, the publishing company, place and year of publication (see [2] below);

(3) for books: names of the authors or editor(s) with initials, the title (in italics), the publishing company, place and year of publication (see [3] below).

Examples:

1. G. Croci, *The Basilica of St. Francis of Assisi after the Earthquake of 26 September 1997*, International Journal for Restoration of Buildings and Monuments **4** (1998) 321 – 335.
2. V. Slowik, E. Schlattner and T. Klink, *Strain Monitoring at Concrete Structures by Using Fibre Bragg Rating Sensors*, in Durable Reinforced Concrete Structures, P. Schwesinger and F.H. Wittmann, Editors, Aedificatio Publishers, Freiburg (1998) 477-493.
3. Z. P. Bazant and M. Kaplan, *Concrete at High Temperatures*, Longman Group Ltd., London (1996).
