Treatment and reclamation of hydro-carbon-bearing oily wastewater as a hazardous pollutant by different processes and technologies: a state-of-the-art review

<https://doi.org/10.1515/revce-2017-0025>
Rev Chem Eng 2019; 35(1): 73–108

Review: Various processes and technologies for treatment of oily wastewater are discussed, the current state of knowledge regarding emulsified wastewater management is described and challenges in existing separation techniques are presented which will help to choose the appropriate process for oily wastewater treatment.

Keywords: coalescence; flotation; membrane; oily wastewater; pollution; wastewater treatment.
