DE GRUYTER

RANDOM OPERATORS AND STOCHASTIC EQUATIONS is a quarterly journal publishing peerreviewed, English-language, original and translated articles on the theory of random operators and stochastic analysis.

The majority of the articles is written by authors from the former USSR, but contributions from leading experts from all over the world will be published as well. Although the focus is on theoretical aspects, contributions on physical and technical applications are included in the journal.

All information regarding notes for contributors, subscriptions, Open access, back volumes and orders is available online at www.degruyter.com/rose.

Contents

- Samah Horigue
 γ -product of white noise space and applications — 203
- Cung The Anh, Nguyen Van Thanh, Nguyen Viet Tuan
On the stability of solutions to stochastic 2D g -Navier–Stokes equations with finite delays — 211
- Mohamed Ait Ouahra, Raby Guerbaz
Moduli of continuity of the local time of a class of sub-fractional Brownian motions — 225
- B. L. S. Prakasa Rao
Parametric estimation for linear stochastic differential equations driven by sub-fractional Brownian motion — 235
- Larysa Pryhara, Georgiy Shevchenko
Wave equation with a coloured stable noise — 249
