STATISTICAL APPLICATIONS IN GENETICS AND MOLECULAR BIOLOGY

EDITOR-IN-CHIEF

Michael P.H. Stumpf, Imperial College London, UK

FOUNDING EDITORS

Nicholas P. Jewell, University of California,
Berkeley, USA

Gary Churchill, The Jackson Laboratory, USA

Elizabeth Thompson, University of
Washington, USA

ASSOCIATE EDITORS

Mark Beaumont, University of Bristol, UK

Tim Beißbarth, University of Göttingen, Germany

Harald Binder, Johannes Gutenberg University
Mainz, Germany

Colin Gillespie, University of Newcastle, UK

Mayetri Gupta, University of Glasgow, Scotland, UK

Alan Hubbard, University of California,
Berkeley, USA

Dirk Husmeier, University of Glasgow,
Scotland, UK

Hongkai Ji, Johns Hopkins University, USA

Sunduz Keles, University of Wisconsin, USA

Kathleen Kerr, University of Washington, USA

Laura Lazzeroni, Stanford University, USA

Shili Lin, Ohio State University, USA

Ping Ma, University of Illinois at
Urbana-Champaign, USA

Paul Marjoram, University of Southern
California, USA

Bart Mertens, Leiden University Medical Centre,
The Netherlands

Olle Nerman, Chalmers University of
Technology, Sweden

Enrico G. Petretto, Imperial College London, UK

Vincent Plagnol, University College London, UK

Elizabeth Purdom, University of California,
Berkeley, USA

Magnus Rattray, University of Manchester, UK

Stephane Robin, Institut National de la Recherche
Agronomique Paris, France

Andrey Rzhetsky, University of Chicago, USA

Guido Sanguinetti, University of Edinburgh, UK

Korbinian Strimmer, University of Leipzig, Germany

Mark van der Laan, University of California,
Berkeley, USA

Arndt von Haeseler, Center for Integrative
Bioinformatics Vienna, Austria

David Wild, University of Warwick, UK

Carsten Wiuf, University of Copenhagen, Denmark

Hongyu Zhao, Yale University, USA

DE GRUYTER

Statistical Applications in Genetics and Molecular Biology seeks to publish significant research on the application of statistical ideas to problems arising from computational biology. The focus of the papers should be on the relevant statistical issues but should contain a succinct description of the relevant biological problem being considered. The range of topics is wide and will include topics such as linkage mapping, association studies, gene finding and sequence alignment, protein structure prediction, design and analysis of microarray data, molecular evolution and phylogenetic trees, DNA topology, and data base search strategies. Both original research and review articles will be warmly received.

ISSN 2194-6302 · e-ISSN 1544-6115

Contents

Research Articles

H.M. Shahzad Asif and Guido Sanguinetti

Simultaneous inference and clustering of transcriptional dynamics in gene regulatory networks — 545

Kelly M. Burkett, Brad McNeney and Jinko Graham

Markov chain Monte Carlo sampling of gene genealogies conditional on unphased SNP genotype data — 559

David Conde, Bonifacio Salvador, Cristina Rueda and Miguel A. Fernández

Performance and estimation of the true error rate of classification rules built with additional information. An application to a cancer trial — 583

Daniel Silk, Sarah Filippi and Michael P.H. Stumpf

Optimizing threshold-schedules for sequential approximate Bayesian computation: applications to molecular systems — 603

Miika Ahdesmäki, Lee Lancashire, Vitali Proutski, Claire Wilson, Timothy S. Davison,
D. Paul Harkin and Richard D. Kennedy

Model selection for prognostic time-to-event gene signature discovery with applications in early breast cancer data — 619

Gro Nilsen, Ørnulf Borgan, Knut Liestøl and Ole Christian Lingjærde

Identifying clusters in genomics data by recursive partitioning — 637
