The annual meeting of the Scandinavian

Association for the Study of Pain (SASP) 18-20

April 2018 – S1

Abstracts

- S7

Knowledge and Attitude Regarding Pain

Management among Herbal Physician Students
in a University — S2

Pain tolerance varies with levels of physical activity in a general population – The Tromsø Study – S3

The bidirectional relationship between sleep disturbance and headache – S4

Could the muscle corrugator supercilii serve as a signal of pain intensity? — S5

Investigating cognitive functioning in patients with chronic non-cancer pain (CNCP) before and during treatment with cannabis based medication – a longitudinal pilot study (N=11) – S6

Differences in conditioned pain modulation effects with psychophysical test-stimulus and nociceptive withdrawal reflex as test-stimulus

Analgesic efficacy of pregabalin as monotherapy in dogs with assumed central neuropathic pain – a randomised double-blind placebo-controlled crossover study – S8

Low socio-economic status, obesity and depression independently associated with pain in the elderly – a Finnish population based study – S9

Whiplash injuries associated with experienced pain and disability can be visualized with [11C]D-deprenyl PET/CT — S11

Feasibility of Long Duration, Slowly Rising
Electrical Stimulation for Preferential Activation
of Nociceptive Afferents in Experimental Pain
Studies – S12

Monitoring patients receiving opioids in the hospital setting: A literature review – S13

Muscle activity under cognitive stress in fibromyalgia – S14

Biomarker studies in blood in painful diabetic neuropathy — S15

Biomarker studies in serum and CSF from patients with Trigeminal Neuralgia – S16
