

Supplementary material

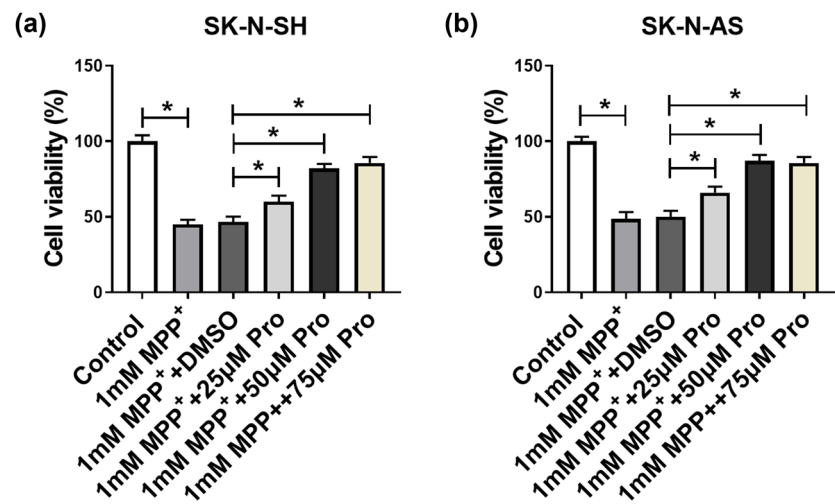

Figure S1: The viability of neuroblastoma cells treated with increasing concentrations of Propofol. (a and b) SK-N-SH and SK-N-AS cells were treated with increasing concentrations of Propofol (25, 50 or 75 µ5) under 1 mM MPP⁺ treatment and cell viability was detect using MTT assay. **P* < 0.05.

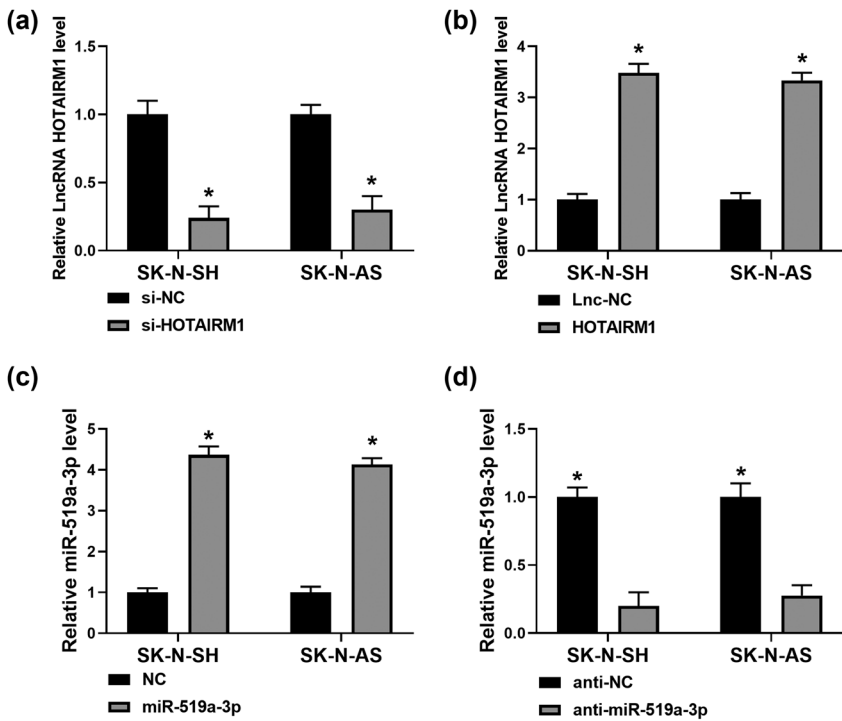

Figure S2: The transfection efficiencies of HOTAIRM1 elevation or knockdown and miR-519a-3p mimic or inhibitor.
