

Contents

Prologue	xi
1. Introduction	1
Hydrogen Fusion Reactions	1
Tritium	4
The Hydrogen Family	6
The Basic Processes in Hydrogen	7
Reviews of Past Work	8
Extrapolating with the Quantum Parameter	8
Rotational Nomenclature	12
2. Perfect Gas Thermodynamics	15
Translational Energy	15
Vibrational Energy	17
Rotational Energy	18
Rotational Populations	20
Normal Hydrogen	24
Rotational Property Tables	25
3. Gas Properties at Low Pressures	32
Kinetic Transport Properties	33
Gas Flow through a Pipe	36
Gas Diffusion down a Pipe	40
Thermal Diffusion	41
4. Saturated Vapor Pressures and Densities	45
The Phase Diagram	45
Triple Points and Critical Points	45
Solid Vapor Pressures	49
Liquid Vapor Pressures	50
Three-Constant Vapor Pressure Equations	52
Density of the Low-Pressure Vapor	54
Density of the Near-Critical Vapor	57

5. Saturated Pure Component Liquid Properties	61
Density	61
Viscosity	62
Surface Tension	63
Diffusion Coefficients	65
Heat Capacity	66
Thermal Conductivity	67
Sound Velocity	70
Refractive Index	70
6. Solid Properties	73
The Hexagonal Crystal Structure	73
The Face-Centered Cubic Structure	76
Interstitial Spaces	77
Molar Volumes	78
Sound Velocity	81
Crystal Growing and Quality	81
Crystallite Light Scattering	83
Mechanical Properties	85
Molecular Self-Diffusion	88
Neutral Clusters	88
7. Thermal Properties of the Solid	92
The Binding Force	92
Energies of the Saturated Solid	93
Simple Theory of the Solid	95
The Debye Temperature	99
Thermal Conductivity	100
Thermal Resistance at an Interface	104
Thermal Diffusivity	105
Tritium Heat Effects	105
8. Thermodynamics of the Saturated Phase Boundary	110
Heats of Transformation	110
The Dilute Gas	113
Internal Energy Calibration	114
Enthalpy and Internal Energy	115
Slow Freeze of Dense D-T Gas	122
9. The Melting Curve	125
Melting Curve Information	125
Heat of Fusion	128
The Lindemann Melting Relation	130

10. The Pressurized Fluid	133
Pressure-Volume-Temperature	133
Estimated Energies of Fluid D-T	135
Transport Properties	145
11. Gas Interactions with Cold Surfaces	152
Effects on Solid Vapor Pressure	152
Molecular Interaction with the Surface	154
Adsorption Isotherms	157
Physisorption and Hindered Rotation	158
12. Hydrogen Solutions	165
Ideal Vapor Pressures	165
Ideal Heats of Transformation	166
First Freezing Temperature	167
Liquid Non-Idealities	167
Phase Separation Possibilities	169
13. Solution Fractionation and Non-Ideality	171
Equilibrium between Phases	171
Fractionation upon Freezing	173
Non-Ideal Vapor Pressure Effects	178
14. Hydrogen-Helium Mixtures	186
Solubility of Helium in Liquid Hydrogen	186
The Melting Line	191
Fluid Phase Diagram	192
Helium Gas Blocking in a Cryostat	192
Thermal Conductivity of Cold Helium-3 Gas	198
15. Mixtures with Other Substances	199
Hydrogen-Neon	199
Mixtures with Nitrogen and Oxygen	203
Other Solids in Liquid Hydrogen	203
16. Tritium Decay	205
Decay Constant and Half-Life	206
Heat Output	208
Beta Particle Energy Spectrum	208
Recoil Energy	212
17. Range of Tritium Radioactivity	214
Beta Particle Range in Hydrogen	214

Tritium Sample of Finite Thickness—Simple Model	219
Beta Absorption in Wall Materials	221
Radiation from Tritium Decay	221
Absorption of X-Rays	226
High-Energy Electron Beams	227
Electron Scattering from Metal Walls	228
18. Radiation Damage in Hydrogen	232
The Basic Processes	232
Cross Sections	235
Low-Energy Processes	236
The Background Electron Energy Spectrum	238
19. Reactions in Irradiated Hydrogen	241
Kinetic Equations	241
Reaction of H_2^+ and H^+	242
Electron-Ion Recombination	244
Atom Recombination	247
Hydride Ion Formation	248
Positive Ion Clustering Reactions	249
Negative Ion Clustering Reactions	252
Helium Tritide	252
Ion-Ion Recombination	253
20. Physical Properties of Species in Irradiated Hydrogen	256
The Diatomic Ion	256
The Triatomic Ion	260
Atoms	261
The Hydride Ion	263
Ion Clusters	264
Electronically Excited Molecules	265
Vibrational and Rotational Relaxation	267
21. Excited Helium and Muonic Hydrogen	270
Helium Ions and Excited States	270
Helium Tritide	275
Muonic Hydrogen	277
22. Radiation Damage in the Solid	281
Excitons and the Conduction Band	281
Atoms	282
Ions and Electrons	287

23. The Hydrogen Exchange Reaction	294
Chemical Equilibrium Constants	294
Basic Theory	298
Radiation Effects in the Gas Phase	299
Atoms in the Gas Phase	304
Low-Temperature Catalysts	304
Radiation Effects in the Liquid and Solid	305
24. Rotational Transitions and Quadrupoles	308
Cause of the Rotational Metastability	308
Self-Catalyzed $J = 1 \rightarrow J = 0$ Transitions	311
$J = 1 \rightarrow 0$ Catalysis	315
$J = 1$ Quadrupolar Interactions	317
Quadrupolar Thermodynamics	319
25. Infrared and Raman Spectroscopy	324
Transition Energies	324
Raman Spectroscopy	325
Infrared Spectroscopy	328
Impurity Lines	331
26. Nuclear Magnetic Resonance	336
Types and Sizes of Magnetic Moments	337
Relaxation in the Gas and Liquid	342
Relaxation in the Solid	344
Nuclear Spin Polarization	347
Helium-3	348
27. Electrical Effects Caused by Radiation	352
DC Electrical Behavior	353
AC Electrical Behavior	356
Electron Drift Velocity and Mobility	357
Ion Mobilities	362
Results on D-T Gas and Liquid	366
Appendix A. Useful Dimensional Relations	369
Appendix B. Hydrogen Permeation in “Impermeable” Materials	370
Index	375
