

Figures

1.1	Tourists in the remote Purnululu National Park, Western Australia, a World Heritage site	9
1.2	The tourism system	11
1.3	Characteristics of natural area tourism	14
1.4	Management and scales of tourism	15
1.5	Nine Bend River in the Mount Wuyi World Heritage site, Fujian Province, China	19
1.6	Whale shark watching, Exmouth, Western Australia	24
1.7	Geotourism attraction, Granite Skywalk, Castle Rock, Porongurup National Park, Western Australia	26
1.8	Tourist walkway, Langkawi Global Geopark, Malaysia	27
1.9	Geotourists witnessing a volcanic eruption on Fernandina Island, Galapagos, Ecuador	29
2.1	Levels of organisation within the science of ecology	42
2.2	Components of an ecosystem	44
2.3	Interaction of the biotic components in ecosystems	46
2.4	Moisture largely determines the development of terrestrial vegetation in the tropical climate zone	47
2.5	Generalised models of nutrient cycling	48
2.6	Simplified marine ecosystem food chain and ecological pyramid	49
2.7	Example of a food web: Kelp in marine ecosystems	50
2.8	Conceptual model of ecosystem processes	51
2.9	Conceptual diagram of the hydrological cycle (local and global scale)	52
2.10	The potential role of the grey wolf as a keystone predator in Yellowstone National Park, USA	57
2.11	Factors affecting the establishment of woodland or grassland communities in the Serengeti–Mara region of East Africa	58
2.12	A comparison of patches and corridors in the landscape matrix. (A) Agricultural matrix; (B) natural forest cover matrix	62
2.13	Location map of important nature-based tourism destinations referred to in this chapter	64

2.14	Predicted ecological impact caused by <i>Phytophthora cinnamomi</i> infection in the Stirling Range National Park, Western Australia	67
2.15	Ecological function of roads	68
2.16	The coral polyp ingests a dinoflagellate, which then becomes incorporated into the gastric endodermis and forms a symbiotic relationship with the polyp	77
2.17	Ecological zones of a fringing coral reef	78
2.18	Potential global distribution of tropical rainforests	81
2.19	Different layers of vegetation which form the structure of a tropical rainforest	82
2.20	Canopy walkway, Taman Negara, Malaysia	85
2.21	Kruger National Park, South Africa	92
2.22	Rural landscape in Leicestershire, England	96
2.23	Potential ecological implications of stress caused by disturbance to wild animals	98
2.24	Ways in which tourists can impact on the natural feeding activities of wildlife	100
3.1	Valley leading to the Jostedal ice cap and Tunsbergdalsbreen glacier, Norway	105
3.2	Location map of important nature-based tourism destinations referred to in this chapter	106
3.3	Signs informing visitors of prohibitive activities at the Boulders Penguin Colony near Cape Town, South Africa	107
3.4	Change in campsite impact parameters under low to moderate levels of annual visitation, Boundary Waters Canoe Area Wilderness	110
3.5	The proposed relationship between frequency of use and amount of disturbance, assuming two threshold points	111
3.6	The hierarchy among environmental parameters with changing amounts of use	112
3.7	Impacts of trampling on vegetation and soils	115
3.8	Result of a field experiment to quantify the environmental impact of horse riding in D'Entrecasteaux National Park, Western Australia	116
3.9	Resistance of different plant communities to trampling	117
3.10	Change in relative biomass for different species of plant according to intensity of trampling	118
3.11	Change in soil depth from the baseline micro-topography after various intensities of horse trampling in D'Entrecasteaux National Park, Western Australia	121
3.12	Mean penetrometry results for campsites in Warren National Park, Western Australia	121
3.13	Components of the universal soil loss equation	123
3.14	Severe trail erosion in Bako National Park, Sarawak, Malaysia	129
3.15	A comparison of degradation (m/km) between assessed trails in coastal south-western Australia	133

3.16	Trail surface showing compaction and linear rutting caused by mountain bikes, John Forrest National Park, Western Australia	136
3.17	Elevated cycle-way constructed off-trail for the purpose of mountain biking activity, John Forrest National Park, Western Australia	136
3.18	Impact of off-road vehicles on soils	140
3.19	Environmental impacts of off-road vehicles in semi-arid and arid ecosystems	144
3.20	Environmental impacts of off-road vehicles on beach environments	145
3.21	Boat trip from Sukau Rainforest Lodge with wildlife observation	149
3.22	Conceptual diagram of the effects of sewage pollution in freshwater ecosystems	151
3.23	Campsite impacts on soils and ultimate effects on vegetation	152
3.24	Ecological significance of coarse woody debris in forested ecosystems	154
3.25	Methodology applied in assessing the loss of coarse woody debris from campsites in Warren National Park, Western Australia	155
3.26	Relative abundance of coarse woody debris at campsites in Warren National Park, Western Australia: Number of 'contacts' by diameter class	156
3.27	Bank erosion: 'Scalloping', root exposure and loss of riparian vegetation adjacent to campsites in Warren National Park, Western Australia	162
3.28	Bat observation platform Mulu National Park, Sarawak, Malaysia	176
3.29	Conceptual diagram of cave habitats	177
3.30	Information panel at Lesueur National Park, Western Australia, an international wildflower tourism destination	185
3.31	Extensive management presence and overdevelopment at Yehliu Geopark in Taiwan. Note that the boardwalk fails to contain visitors	188
3.32	Potential impacts from non-natural patches	193
4.1	A generic planning process	202
4.2	Possible stakeholders of natural area tourism	203
4.3	Ladder of citizen participation	206
4.4	Chronological relationship between the recreation/tourism planning frameworks	211
4.5	The Recreation Opportunity Spectrum	212
4.6	Process for applying the Recreation Opportunity Spectrum planning framework	214
4.7	Location map of important nature-based tourism destinations referred to in this chapter	218
4.8	Process for applying the Limits of Acceptable Change planning framework	219
4.9	Bob Marshall Wilderness Complex, USA	222
4.10	Process for applying the Visitor Impact Management planning framework	224
4.11	Process for applying the Tourism Optimisation Management Model	227
4.12	Using the Tourism Optimisation Management Model to take management action	230

4.13	The Visitor Activity Management Process as part of national park management	232
4.14	Process for applying the Visitor Activity Management Process	233
4.15	Process for applying the Visitor Experience and Resource Protection planning framework	234
5.1	Location map of important nature-based tourism destinations referred to in this chapter	243
5.2	Zoning of international biosphere reserves	250
5.3	Common ways of classifying approaches to managing visitors to natural areas	256
5.4	Walking track in Tasmanian Wilderness World Heritage site, Australia	262
5.5	Factors influencing the choice of management actions by managers	279
5.6	Aboriginal shelter and interpretation, Nourlangie, Kakadu National Park	283
5.7	Environmental management system model	289
6.1	The education–knowledge–awareness relationship embodied within interpretation	295
6.2	Learning about skulls and teeth is best achieved if visual aids and specimens are available as a first-hand experience and active involvement	297
6.3	Location map of important nature-based tourism destinations referred to in this chapter	299
6.4	Stationary terminal in a visitor centre for a network of protected areas in the cultural landscape of the Hoexter district in Germany	307
6.5	The talking pen and interactive map developed by staff at the Hong Kong Geopark in order to facilitate self-guided touring	308
6.6	Interactive landscape model in a geo-interpretive centre, Grand Canyon National Park, USA	310
6.7	Information panel indicating the site, walk trails and main features of the Mount Matilda Walk Trail, Western Australia	311
6.8	Interpretive panel located at a lookout at the Shark Bay World Heritage site, Western Australia	312
6.9	Orang-utan feeding platform at Bukit Lawang, Sumatra, Indonesia	317
7.1	Location map of important nature-based tourism destinations referred to in this chapter	329
7.2	Variable radial transect method for measuring site area	335
7.3	Geometric method for measuring site area	336
7.4	Method for measuring trail cross-sectional area to determine trail erosion	346
7.5	Importance–performance grid	367
8.1	Tsavo West National Park, Kenya	382
8.2	Stuðlaberg (the formation of basaltic columns) at Reynisstaðarfjara, eastern Iceland	383
8.3	Sample views of a geological electronic tour guide, Sultanate of Oman	386
8.4	Tour group planting trees on the banks of the Kinabatangan River, Sabah, Malaysian Borneo, as part of a voluntourism programme	388
