

Plates

Plate 1.1	A hot summer's day in a public pool in Freiburg, Germany	4
Plate 1.2	Water quality is an essential aspect of a holiday	5
Plate 1.3	Warning sign for toxins and algal bloom at Lake Forsyth, New Zealand	7
Plate 2.1	Biankini, Dead Sea Beach, West Bank	39
Plate 2.2	A water-efficient urinal at a bush-bar in Zanzibar, Tanzania	41
Plate 3.1	Large green areas in dry climates are water intense. Irrigation is, in resort hotels in warm climates, the most important direct or local water-consuming factor	58
Plate 3.2	A pond of grey water for lawn irrigation has been integrated into the landscape of the Sugar Beach Resort, Mauritius	59
Plate 3.3	Pool filters need to be cleaned through backwash. Depending on the measure used, this can require considerable amounts of freshwater	61
Plate 3.4	Private pools are a new trend in many destinations, and can considerably increase overall water consumption	61
Plate 3.5	Rain showers are the latest implementation in many luxurious hotels, causing considerable growth in water use	64

Plate 3.6	Laundry is water and energy intense. In many hotels, towels and bed linen will be changed on a daily basis, even though many guests may change these only once per week or even less often at home	67
Plate 3.7	Potatoes shipped from the Netherlands for consumption in a resort hotel in a small island in the Seychelles	76
Plate 3.8	An unconventional way of reducing plastic waste, saving energy for transport and distribution and enhancing guest quality perceptions: Water bottled at the Sentido Apollo Blue Hotel, Greece	81
Plate 3.9	Food management can help to reduce global water demand	81
Plate 4.1	Pool size and volume are important factors in ‘water lock-in’	91
Plate 4.2	Entrance area of the Sunwing Kalithea Hotel in Rhodes, Greece	102
Plate 4.3	Where guests are provided with a given option, in this case linen replacement	103
Plate 4.4	Double pool containing freshwater (left) and seawater (right)	105
Plate 4.5	Clearly communicated flush option for toilets	117
Plate 4.6	Leftovers from a breakfast table by tourists at Tangalooma Island Resort, Australia	118
Plate 4.7	In-room environmental information is now widespread, but has often caused suspicions on the side of guests as to whether environmental engagement is genuine	121
Plate 4.8	A basket for used towels and linen. Rather than throwing these on the floor, guests are asked to deposit towels and linen in the basket if they request a change	128

Plate 4.9	Warm water can be produced in many destinations with the help of solar thermal heat systems	132
Plate 4.10	Where water is regionally scarce, water management in tourism can be undertaken by both technical means and communication	133
Plate 4.11	Grey water systems for irrigation can help in reducing freshwater demand	134
Plate 4.12	Old and inefficient insulation of water pipelines	135
Plate 5.1	Low water level impact on Lake Huron coastal tourism properties	154
