PREFACE	xi
I	
LATTICE PATH PROBLEMS AND VECTORS OF INTEGERS	3
1. Representation of subsets of $\{1, \dots, N\}$	3
2. A refinement of the Chung-Feller Theorem	5
3. Lattice paths and the ballot theorem	8
4. Repeated reflections and applications	12
Exercises	14
References	17
II	
THE DOMINANCE THEOREM AND SMIRNOV TEST-STATISTICS	18
1. A theorem on domination and its geometrical interpretation	19
2. Discussion of the dominance theorem and some special cases	21
3. Duality and application to Smirnov statistics	25
Exercises	29
References	32
III	
SOME APPLICATIONS OF DOMINANCE TO STATISTICAL PROBLEMS	33
1. The role of dominance in combinatorial problems	33
2. Dominance tests for Lehmann alternatives	35
Exercises	54
References	56
IV	
THE COMBINATORICS OF KNOCK-OUT TOURNAMENTS	57
1. The classical case	58
2. Random knock-out tournaments	60
3. A comparison of tournaments	65
Exercises	68
References	71

v

## A MISCELLANY OF FURTHER RESEARCH PROBLEMS

72

## 1. A comparison of selection procedures

72

2. The numbers  $\binom{n}{r} \binom{n}{r-1} / n$ 

77

## 3. Weak inadmissibility of tests

78

Exercise

80

References

80

## APPENDIX

## On some convolution identities from lattice path combinatorics

81

References

89

## NOTES AND SOLUTIONS

91

## SUPPLEMENTARY BIBLIOGRAPHY

103

## INDEX
