

CONTENTS

PREFACE	v
PREFACE TO THE THIRD EDITION	vii
INTRODUCTION	1
0.1 The real number system. 0.2 Decimal representation of rational numbers. 0.3 Decimals which are neither finite nor repeating. 0.4 Definition of real numbers in terms of rational numbers. 0.5 The number scale. 0.6 The rational points are dense on 1. 0.7 Points on the number scale not marked with rational points. 0.8 Real numbers and their properties. 0.9 Assumptions and working rules. 0.10 Functions and functional relations. 0.11 The double use of symbols. 0.12 The Greek alphabet.	
I SPEED AND LIMITS	12
1.1 The idea of speed. 1.2 Speed at a point. 1.3 The idea of limit. 1.4 Properties of limits. 1.5 Improvements in notation.	
II THE DERIVATIVE OF A FUNCTION	19
2.1 The derivative of a function. 2.2 The derivative as the slope of the tangent line to a curve. 2.3 The four step rule. 2.4 The limit of a ratio when both numerator and denominator tend to zero.	
III RULES AND FORMULAS FOR DIFFERENTIATION	26
3.1 Rules for differentiation. 3.2 Formulas for differentiation. 3.3 Proofs of formulas for differentiation. 3.4 The derivative of the square root of a function. 3.5 The derivatives of functions which are defined implicitly.	
IV DIFFERENTIALS, DIFFERENTIAL EQUATIONS AND ANTI-DIFFERENTIALS	36
4.1 Definition and geometrical interpretation of a differential. 4.2 Relations between dy and Δy . 4.3 Functions with vanishing derivatives. 4.4 The fundamental theorem of the differential calculus. 4.5 Two theorems on differentials. 4.6 Some further applications of differentials. 4.7 Differential relations. 4.8 Rules for determining differentials. 4.9 Anti-differentials. 4.10 Formulas for anti-differentials.	
V THE DEFINITE INTEGRAL	50
5.1 The definite integral. 5.2 Continuous function. 5.3 Definition of continuity. 5.4 Maximum and minimum values of a function. 5.5 Assumptions regarding the behaviour of continuous functions. 5.6 Sequences of numbers. 5.7 Notations for sums. 5.8 Areas and volumes. 5.9 A problem on area. 5.10 The definition of the definite integral. 5.11 The fundamental theorem of the integral calculus. 5.12 The solution of the area problem of § 5.9. 5.13 The symbol for the definite integral. 5.14 The double use of symbols. 5.15 The existence of the definite integral. 5.16 The definite	

integral of continuous functions. 5.17 Abbreviated methods. 5.18 Area as a function of the variable x and the double meaning of the symbol dA . 5.19 The existence of the definite integral of a continuous function. 5.20 The indefinite integral. 5.21 The fundamental theorem of the integral calculus.	
VI THE TRANSCENDENTAL FUNCTIONS	71
6.1 Transcendental functions. 6.2 The trigonometric functions. 6.3 The ratio $(\sin x)/x$. 6.4 The derivatives of the trigonometric functions. 6.5 The exponential function $f(x) = a^x$. 6.6 The logarithmic function. 6.7 The function $(1+1/x)^x$. 6.8 The limit of the function $(1+1/x)^x$ as $ x \rightarrow \infty$. 6.9 The derivatives of the logarithmic and exponential functions. 6.10 The inverse trigonometric functions. 6.11 The derivatives of the inverse trigonometric functions. 6.12 Principal values. 6.13 Exponential function with complex exponent. 6.14 Anti-differentials involving transcendental functions.	
VII RELATED RATES, MAXIMA AND MINIMA, CURVE PLOTTING	94
7.1 Related rates. 7.2 Increasing and decreasing functions. 7.3 Extreme values of a function. 7.4 Maximum and minimum values of functions relative to an open interval. 7.5 The first test for maxima and minima. 7.6 Derivatives of order higher than the first and points of inflection. 7.7 The second test for extreme values of a function. 7.8 The graphs of transcendental functions.	
VIII DISPLACEMENT, VELOCITY AND ACCELERATION. APPLICATIONS OF RATES OF CHANGE. FIRST MOMENTS, WORK, AND PRESSURE	112
8.1 Velocity and acceleration of bodies in motion. 8.2 Relation between force and acceleration. 8.3 Some applications of rates of change. 8.4 Differential equations in which the variables are not separable. 8.5 First moments and centroids. 8.6 Coordinates of centroids. 8.7 Centre of gravity. 8.8 The centroid of a solid body. 8.9 The coordinates of the centroid of a solid body. 8.10 Centroids of symmetrical bodies. 8.11 The moment of a body relative to its centroid. 8.12 Centroids of areas. 8.13 Work. 8.14 Hydrostatic pressure.	
IX FURTHER METHODS OF DETERMINING ANTI-DIFFERENTIALS	139
9.1 The anti-differential of udv . 9.2 Anti-differentials containing trigonometric functions. Trigonometric substitution. 9.3 Improper integrals. 9.4 Anti-differentials containing rational functions. 9.5 Approximate integration. 9.6 The trapezoidal rule. 9.7 Simpson's rule. 9.8 The prismoidal formula.	
X ROLLE'S THEOREM, MEAN VALUE THEOREM, PARAMETRIC EQUATIONS, ARC LENGTH, SURFACE OF REVOLUTION, CURVATURE, SECOND ORDER DIFFERENTIAL EQUATIONS, L'HOSPITAL'S RULE	157
10.1 Introduction. 10.2 Rolle's theorem. 10.3 The mean value theorem. 10.4 Functions with vanishing derivatives and the fundamental theorem of	

the differential calculus. 10.5 Parametric equations. 10.6 The length of a curve. 10.7 Surface of revolution. 10.8 Differential of arc length. 10.9 Curvature. 10.10 Differential equations of the first and second order. 10.11 The catenary. 10.12 Hyperbolic functions. 10.13 Linear differential equations of the second order with constant coefficients. 10.14 A further discussion of limits. 10.15 l'Hospital's rule.

XI FUNDAMENTAL THEOREMS 189

11.1 Introduction. 11.2 Sets and their properties. 11.3 The supremum and infimum of a set. 11.4 The existence of suprema and infima of sets. 11.5 Sequences. 11.6 The limit of a monotone sequence. 11.7 Functions and their properties. 11.8 The suprema and infima of bounded functions. 11.9 Properties of continuous functions. 11.10 The bounds of functions which are continuous on closed intervals. 11.11 The extrema of functions which are continuous on closed intervals. 11.12 The oscillation of a continuous function. 11.13 Functions continuous on a closed interval. 11.14 Values assumed by continuous functions.

XII INFINITE SERIES 201

12.1 The meaning of sequences and series. 12.2 Convergence, divergence and value of infinite series. 12.3 A second method of assigning a value to a series. 12.4 Tests for convergence. 12.5 The ratio test. 12.6 Series of positive and negative terms. Absolute convergence. 12.7 Alternating series test. 12.8 Functions represented by series. 12.9 Series whose terms are functions of x . 12.10 Operations with series. 12.11 Computation by means of series.

XIII PARTIAL DERIVATIVES, MULTIPLE INTEGRATION, MOMENTS OF INERTIA 220

13.1 Functions of two or more variables. 13.2 The geometrical interpretation of a function of two or more variables. 13.3 Partial derivatives. 13.4 Total differentials. 13.5 Partial derivatives of order higher than the first. 13.6 Double integrals. 13.7 Evaluation of a double integral. 13.8 Fundamental theorem on the evaluation of double integrals. 13.9 Polar coordinates. 13.10 Multiple integrals. 13.11 Second moments, moments of inertia. 13.12 Second moments of solid bodies. 13.13 Interpretation of moments of inertia. 13.14 Moments and centroids by multiple integration. 13.15 The transfer theorem. 13.16 Radius of gyration. 13.17 The chain rule for partial derivatives of composite functions. 13.18 Directional derivatives.

XIV VECTORS AND SOLID GEOMETRY 252

14.1 Definitions and notation. 14.2 Definition of a vector in terms of its components. 14.3 Direction angles, equations of lines. 14.4 Multiplication of vectors. 14.5 The equation of a plane. 14.6 Distance from a point to a plane. 14.7 The tangent plane to a surface.

XV DETERMINANTS, MATRICES AND LINEAR EQUATIONS 265

15.1 Definition of a determinant. 15.2 Properties of determinants. 15.3 Determinants of order higher than three. 15.4 Matrices. 15.5 Cramer's rule. The solution of $a_{11}x + a_{12}y + a_{13}z = d_1$, $i = 1, 2, 3$, if the rank of A is

three. 15.6 Homogeneous linear equations. 15.7 Two homogeneous equations in three unknowns. 15.8 Vectors which are perpendicular to two vectors.	
XVI LINEAR RELATIONS AMONG VECTORS	275
16.1 Definition of linear dependence. 16.2 Linear relations among four or more vectors. 16.3 Two-dimensional vector spaces. 16.4 Vectors as ordered sets of numbers.	
XVII VECTOR PRODUCTS, APPLICATIONS OF VECTORS	281
17.1 Vector products. 17.2 Curvilinear motion.	
XVIII QUADRIC SURFACES	289
18.1 The general second degree equation. 18.2 The quadric surfaces. 18.3 Ruled surfaces.	
INDEX	297

CALCULUS
