Title: Approaches to systemic functional grammar : convergence and
divergence / edited by Gordon Tucker, Huang Guowen, Lise Fontaine and
Edward McDonald.

Description: Bristol : Equinox Publishing Ltd, 2020. | Includes
bibliographical references and index. | Summary: "This volume brings
together contributions to a key area of interest within the framework of
systemic functional linguistics: the role of meaning in the
lexicogrammar. A key figure in the debate on this role is Robin Fawcett
who has long argued for a fully semantic lexicogrammar where the
relevant systems are seen as representing 'choices between meanings'.
This volume, a festschrift in honour of Fawcett's long-standing
contribution to the field, raises important questions related to
lexicogrammatical meaning within systemic functional linguistics by
examining the meaning-form interface, lexicogrammatical meaning in theme
and transitivity, as well as lexis, intonation and its role in
computational models. Importantly, discussions in the volume also
explore the relationship between alternative approaches to systemic
functional lexicogrammar, notably between the Hallidayan model and the
Cardiff Grammar model developed primarily by Robin Fawcett"-- Provided
