

Preface

I BEGAN WORKING on this book in 1987 while I was a visiting assistant professor at the University of Maryland. I wish to thank the members of the Department of History and the Committee on History and Philosophy of Science for supporting and encouraging me during the early stages of research. I am particularly grateful to the reading group of Lindley Darden, Pamela Henson, and Joe Cain who commented on an early draft of the book.

During the course of my research I had the opportunity to interview several biologists about their work or about historical figures with whom they were acquainted. Others generously responded to my questions in writing. These include F. Herbert Bormann, Jim Collins, Maxwell Dunbar, W. T. Edmondson, Doug Gill, Frank Golley, Jack Harley, William Hiesey, G. Evelyn Hutchinson, David Keck, Eugene Odum, Howard Odum, Bernard Patten, Charles Reif, Peter Rich, Paul Richards, John Teal, Saran Twombly, and Bill Winner.

I greatly appreciate the opportunity to study unpublished letters and manuscripts at the following institutions: American Heritage Center, University of Wyoming; University of Minnesota Archives; Smithsonian Institution Archives; Magdalen College Archives, Oxford University; Department of Botany, Cambridge University; Department of Botany, Oxford University; Carnegie Institution of Washington Archives; Sterling Library, Yale University; Office of the Registrar, Park College. I wish to acknowledge the generous assistance I received at all these institutions. I also wish to thank the librarians at Radford University, particularly Bud Bennett, for their help. I am most grateful to Nancy Slack for helping to arrange access to the G. Evelyn Hutchinson papers during a visit to Yale University. She has been an excellent source of information on Hutchinson and his students. Tobey Appel kindly allowed me to read parts of her

unpublished history of biology at the National Science Foundation. She patiently answered many of my questions about post–World War II funding of science. Peter Taylor provided me with useful information about the work of Howard Odum. Although we disagree on some points of interpretation, his insistence on the importance of Odum's work has influenced my thinking on the history of modern ecology. Jim Collins read the entire manuscript, corrected many errors, and made numerous helpful suggestions. I particularly appreciate the time that he has so generously spent on the telephone discussing my research as it progressed.

This research was supported by grants from the National Endowment for the Humanities, the Smithsonian Institution, and the Radford University Foundation.

Finally, I wish to thank Susan, Kirsten, and Christopher for putting up with a historian in the family.

An Entangled Bank
