Preface and Dedication vii

- 1 Toward a Universal Theory of Brain Arousal 1**
  - What Is to Be Explained? Ethology and the Mechanisms of Arousal 2
  - Operational Definition of Arousal 4
  - A Quantitative Approach to Physical Measurement of Generalized Arousal 6
  - The Neurobiology of Arousal Constitutes an Interesting Application of Information Theory 13
  - Claims for This Chapter and Introduction to Chapters Following 24
- 2 Anatomy Is Not Destiny, but a Little Neuroanatomy Helps 26**
  - Multiplicity and Redundancy of Ascending Arousal Pathways Prevent Failure 26
  - Primitive “Master Cells” in the Brainstem Provide a Neuroanatomic Core that Theoretically Matches the Behavioral Data 42
  - Long-Distance Lines Tuning Local Modules 48
  - Summary and Hypothetical Implications for Human Behavior 51
- 3 Arousal Is Signaled by Electrical Discharges in a System of Nerve Cells 55**
  - Traveling Up the Brainstem 56
  - Special Cases: Olfaction and Vision 65
  - Informational Content Governs Amplitude of Response in Neurons Related to Arousal 66
  - Cerebral Cortex, the EEG 68
  - Electrical Activity in Three Arousal-Related Biological Systems 68
- 4 Autonomic Nervous System Changes Supporting Arousal; the Unity of the Body 71**
  - Patterns of Autonomic Responses 72
  - Reformulations 77
  - A High Information System Shows Coordination *sans* Correlation 78
  - Supporting Hormone-Dependent Behaviors 81
  - Summary 82
- 5 Genes Whose Neurochemical Products Support Arousal 83**
  - Genes Associated with Classical Systems 83
  - Genes Newly Recognized 90
  - Concepts and Questions 95
  - Summary 98

<b>6</b>	<b>Heightened States of Arousal: Sex Compared to Fear</b>	99
	Sex Behavior's CNS Mechanisms Require Arousal	100
	Generalized Arousal Affects Specific Arousals and Vice Versa	107
	Contrast Sex and Fear	115
	Applicability of Information Theory	119
	Libido and Stress in Humans	120
	Summary	124
<b>7</b>	<b>Major Systems Questions about Brain Arousal Networks</b>	125
	What Are Universal Operating Features of Arousal Systems?	126
	How Do We Meet the Requirement for Rapid Changes of CNS State?	129
	Sensitivity and Alacrity of Response, Yet Stability? How?	131
	Does Automata Theory Apply?	132
	Questions in the Time Domain	136
	Questions about Spatial Properties	137
	Thermodynamics, Information Theory, and Questions for the CNS	138
	How Does a Sine Wave Impact a Sawtooth?	140
	Unity from Diversity?	141
<b>8</b>	<b>Summary and Practical Importance: From Biological Mechanisms to Health Applications</b>	143
	Main Points	143
	Applications to Human Conditions	147
	<b>Works Cited</b>	155
	<b>Acknowledgments</b>	197
	<b>Index</b>	199
