

Acknowledgments

*D*URING THE GENESIS OF THIS book I have profited from the collegiality, insights, and assistance of many people. First, I must thank Professor Mark Elgar and his colleagues in the Department of Zoology at the University of Melbourne for providing such a stimulating atmosphere for me during a sabbatical year spent there. The opportunity for long, interruption-free days is a priceless commodity for someone accustomed to a full schedule of teaching and research overlain by an often-crushing load of administrative responsibilities. Notwithstanding, the Ecology and Evolutionary Biology department at Brown University has been a wonderful venue in which to work for much of my career. I have learned a great amount from my colleagues here, which, combined with the enormously supportive and egalitarian atmosphere they have provided, makes this site an academic person's dream come true. And, the Brown students have been a constant source of stimulation and inspiration.

I have conducted most of this research at and in the immediate vicinity of the Darling Marine Center in Walpole, Maine, the marine station of the University of Maine. In spite of its name and primary function, the Center contains protected fields that I have been free to manipulate as needed for the experiments and long-term observations described in this work. I am particularly indebted to its director, Kevin Eckelbarger, and to key staff members Tim Miller and Linda Healy,

for providing such a welcoming environment for my students and me.

I am particularly indebted to Reuven Dukas, Mark Elgar, Linden Higgins, Johanna Schmitt, and Jonathan Waage, who have generously commented on major parts of the manuscript at various stages of its development. My research on *Misumena* has been supported by the National Science Foundation and that of several of my students by the Howard Hughes Foundation. Elizabeth Farnsworth, herself once a field assistant on this project, performed the artwork. Elizabeth Morse produced the graphics. G. B. Edwards, Robert Edwards, and Daniel Jennings identified spiders. Ann Downer-Hazell, Alissa Anderson, and Kate Brick of Harvard University Press, and John Donohue, Rebecca Homiski, and Betty Pessagno of Westchester Book Services, guided the project through to completion.

I thank the following publishers for use of copyrighted materials in their care: American Arachnological Society (*Journal of Arachnology*), Blackwell Publishing (*Biological Journal of the Linnean Society*), Ecological Society of America (*Ecology*), Elsevier Publishers (*Animal Behaviour*), and Springer-Verlag Berlin Heidelberg (*Oecologia*).

Predator upon a Flower
