

CONTENTS

Volume V

- 94-2559. "Physical properties of single crystal magnesium," *Proc. Am. Acad. Arts Sci.* 67, 29-41 (1932).
- 95-2572. "A new kind of e.m.f. and other effects thermodynamically connected with the four transverse effects," *Phys. Rev.* 39, 702-715 (1932).
- 96-2587. "A transition of silver oxide under pressure," *Rec. Trav. Chim. Pays-Bas* 51, 627-632 (1932).
- 97-2593. "The pressure coefficient of resistance of fifteen metals down to liquid oxygen temperatures," *Proc. Am. Acad. Arts Sci.* 67, 305-344 (1932).
- 98-2633. "The compressibility of eighteen cubic compounds," *Proc. Am. Acad. Arts Sci.* 67, 345-375 (1932).
- 99-2664. "The effect of homogeneous mechanical stress on the electrical resistance of crystals," *Phys. Rev.* 42, 858-863 (1932).
- 100-2671. "The pressure-volume-temperature relations of fifteen liquids," *Proc. Am. Acad. Arts Sci.* 68, 1-25 (1933).
- 101-2697. "Compressibilities and pressure coefficients of resistance of elements, compounds, and alloys, many of them anomalous," *Proc. Am. Acad. Arts Sci.* 68, 27-93 (1933).
- 102-2765. "The effect of pressure on the electrical resistance of single metal crystals at low temperature," *Proc. Am. Acad. Arts Sci.* 68, 95-123 (1933).
- 103-2795. "Two new phenomena at very high pressure," *Phys. Rev.* 45, 844-845 (1934).
- 104-2796. "The melting parameters of nitrogen and argon under pressure, and the nature of the melting curve," *Phys. Rev.* 46, 930-933 (1934).
- 105-2801. "The compressibility of solutions of three amino acids" (with R. B. Dow), *J. Chem. Phys.* 3, 35-41 (1935).

- 106-2809. "Theoretically interesting aspects of high pressure phenomena," *Rev. Mod. Phys.* 7, 1-33 (1935).
- 107-2843. "Electrical resistances and volume changes up to 20,000 kg/cm²," *Proc. Nat. Acad. Sci. U.S.* 21, 109-113 (1935).
- 108-2849. "On the effect of slight impurities on the elastic constants, particularly the compressibility of zinc," *Phys. Rev.* 47 393-397 (1935).
- 109-2855. "The melting curves and compressibilities of nitrogen and argon," *Proc. Am. Acad. Arts Sci.* 70, 1-32 (1935).
- 110-2887. "Measurements of certain electrical resistances, compressibilities, and thermal expansions to 20,000 kg/cm²," *Proc. Am. Acad. Arts Sci.* 70, 71-101 (1935).
- 111-2919. "The pressure-volume-temperature relations of the liquid, and the phase diagram of heavy water," *J. Chem. Phys.* 3, 597-605 (1935).
- 112-2929. "Effects of high shearing stress combined with high hydrostatic pressure," *Phys. Rev.* 48, 825-847 (1935).
- 113-2953. "Polymorphism, principally of the elements, up to 50,000 kg/cm²," *Phys. Rev.* 48, 893-906 (1935).
- 114-2967. "Compressibilities and electrical resistance under pressure, with special reference to intermetallic compounds," *Proc. Am. Acad. Arts Sci.* 70, 285-317 (1935).
- 115-3001. "Shearing phenomena at high pressure of possible importance for geology," *J. Geol.* 44, 653-669 (University of Chicago Press, 1936).
- 116-3018. "Flow phenomena in heavily stressed metals," *J. Appl. Phys.* 8, 328-336 (1937).
- 117-3028. "Polymorphic transitions of inorganic compounds to 50,000 kg/cm²," *Proc. Nat. Acad. Sci. U.S.* 23, 202-205 (1937).
- 118-3033. "Shearing phenomena at high pressures, particularly in inorganic compounds," *Proc. Am. Acad. Arts Sci.* 71, 387-460 (1937).
- 119-3107. "Polymorphic transitions of 35 substances to 50,000 kg/cm²," *Proc. Am. Acad. Arts Sci.* 72, 45-136 (1937).
- 120-3200. "The phase diagram of water to 45,000 kg/cm²," *J. Chem. Phys.* 5, 964-966 (1937).
- 121-3203. "The resistance of nineteen metals to 30,000 kg/cm²," *Proc. Am. Acad. Arts Sci.* 72, 157-205 (1938).

Collected Experimental Papers
of P. W. Bridgman
