

Contents

Part One. Specialization at the Molecular Level

- | | |
|---|-----|
| 1. Membrane Biogenesis | 3 |
| GEORGE E. PALADE | |
| 2. Lipid-Protein Associations | 31 |
| O. HAYES GRIFFITH AND PATRICIA C. JOST | |
| 3. Molecular Architecture of Oligomeric Membrane Proteins | 61 |
| FERNANDO CABRAL, WALTER BIRCHMEIER,
CARMEN E. KOHLER, AND GOTTFRIED SCHATZ | |
| 4. Transmembrane Compositional Asymmetry of Lipids in
Bilayers and Biomembranes | 78 |
| THOMAS E. THOMPSON | |
| 5. Ligand-Binding Properties of Membrane-Bound Cholinergic
Receptors of <i>Torpedo Marmorata</i> | 99 |
| JONATHAN B. COHEN | |
| 6. The Functional Roles of Band 3 Protein of the Red Blood
Cell | 128 |
| ASER ROTHSTEIN | |
| 7. Energetics and Molecular Biology of Membrane Transport | 160 |
| H. R. KABACK, S. RAMOS, D. E. ROBERTSON, P. STROOBANT,
AND H. TOKUDA | |

Part Two. Asymmetry in Transport

- | | |
|---|-----|
| 8. Asymmetry and the Mechanism of the Red Cell Na-K
Pump, Determined by Ouabain Binding | 191 |
| JOSEPH F. HOFFMAN | |
| 9. Simultaneous or Consecutive Occupancy by Sodium and
Potassium Ions of Their Membrane Pump | 212 |
| ROBERT L. POST | |

10. Proton Translocation in Submitochondrial Particles and Reconstituted Segments of the Respiratory Chain	222
PETER C. HINKLE	
11. Studies on the Molecular Mechanism of Anion Transport across the Red Blood Cell Membrane	229
HERMANN PASSOW AND LAILA ZAKI	

Part Three. Polar Faces in Epithelia

12. The Double-Membrane Model for Transepithelial Ion Transport: Are Homocellular and Transcellular Ion Transport Related?	253
STANLEY G. SCHULTZ	
13. Differentiation of Cell Faces in Epithelia	272
R. KINNE AND E. KINNE-SAFFRAN	
14. Solute-Coupled Water Transport in the Kidney	294
EMILE L. BOULPAEP	
15. Modes of Sodium Transport in the Kidney	316
GUILLERMO WHITTEMBURY, MADALINA CONDRESCU-GUIDI, MARGARITA PEREZ-GONZALEZ DE LA MANNA, AND F. PROVERBIO	
Index	333

Molecular Specialization and Symmetry in Membrane Function
