

Contents

Preface	vii
Acknowledgments	xi
Chapter 1. Reading about Prothrombin	3
Chapter 2. Prothrombin and Associated Word Symbols	11
A. Development of Nomenclature	11
B. Effort at Simplified Nomenclature	14
Chapter 3. Purification and Properties of Prothrombin	19
A. Perspective	19
B. Prothrombin as a Concept	21
C. Purification of Prothrombin	22
D. Isolation of Prothrombin by Magnesium Hydroxide Adsorption	26
<i>a. Procurement of plasma</i>	26
<i>b. Isoelectric precipitation of prothrombin</i>	26
<i>c. Adsorption of prothrombin on magnesium hydroxide</i>	28
<i>d. Decomposition of magnesium hydroxide</i>	29
<i>e. Fractionation with ammonium sulfate</i>	29

<i>f. Isoelectric fractionation</i>	31
<i>g. Additional purification</i>	33
<i>h. Chromatography procedure (Miller 1958b)</i>	35
<i>i. Chromatography procedure with DEAE cellulose</i>	36
E. Properties of Purified Bovine Prothrombin	39
F. Summary	43
Chapter 4. Prothrombin Activation by Autocatalysis	45
A. General Remarks	45
B. Studies with the Ultracentrifuge	47
C. Electrophoresis of Prothrombin Activating in Sodium Citrate Solution	48
D. Prothrombin Activity Measured by Two-Stage Analysis with Prothrombin Activating in 25 Per Cent Sodium Citrate Solution	50
E. Some Chemical Changes Associated with Prothrombin Activating in 25 Per Cent Sodium Citrate Solution	52
F. Thrombin Yield from Stored Prothrombin Preparations	53
G. Inhibition and Acceleration of Prothrombin Activation in Sodium Citrate Solution	55
H. Generation of Nonthrombin Accelerator of Prothrombin Activation by Prothrombin Activation in Sodium Citrate	62
<i>a. Experiment 1</i>	62
<i>b. Experiment 2</i>	63
<i>c. Experiment 3</i>	63
<i>d. Experiment 4</i>	65
I. "Spontaneous" Changes in Purified Prothrombin	65
J. Development of Thrombin-E Activity	66
K. Activation with Protamine Sulfate Solution	67
L. Separation of Citrate Thrombin	68
<i>a. Fractionation with sodium citrate</i>	68
<i>b. Adsorption and elution of thrombin</i>	69
M. Summary	71
Chapter 5. Prothrombin Activation by Coautocatalysis	73
A. Mixtures of Prothrombin and Thrombin	74
B. Electrophoresis of Mixtures of Prothrombin and Thrombin	77
C. Prothrombin as Substrate for the Enzyme Thrombin	79
D. Partial Activation or Conversion of Prothrombin to Autoprothrombin I with Platelets or with Purified Platelet Factor 3	82
E. Conversion of Prothrombin to Thrombin in Solutions with Platelet Factor 3, Thrombin, and Calcium Ions	86

CONTENTS

xvii

F. Conversion of Prothrombin to Thrombin in Solutions with Platelet Factor 3, Small Amounts of Thrombin, and Calcium Ions	87
G. Conversion of Prothrombin to Thrombin in Solutions with Platelet Factor 3, Small Amounts of Thrombin, and Organic Compounds	91
H. Conversion of Prothrombin to Thrombin in Solutions with Platelet Cofactor I and Thrombin	93
I. Conversion of Prothrombin to Thrombin in Solutions with Platelet Cofactor I, Platelet Factor 3, Calcium Ions, and Thrombin	94
J. Calcium Requirements for Prothrombin Activation	95
K. Activation with Platelet Factor 3, Calcium, and Trypsin	96
L. Summary	99

Chapter 6. Prothrombin Activation and Tissue Procoagulants 102

A. Thromboplastin as a Word	102
B. The Procoagulant: Lung Extract Thromboplastin (Bovine)	103
C. The Procoagulant: Lung Thromboplastin (Bovine)	104
D. The Procoagulant: Brain Extract Thromboplastin (Rabbit)	104
E. The Procoagulant: Brain Thromboplastin (Rabbit)	104
F. Lipid Procoagulant	104
G. Preparations of Tissue Procoagulants	105
H. Helpful Experiments Reviewed	105
<i>a. Experiment 1. Purified prothrombin activates in the presence of lung thromboplastin</i>	106
<i>b. Experiment 2. Prothrombin activates itself more rapidly in the presence of Ac-globulin</i>	108
<i>c. Experiment 3. Mixtures of stored human plasma and plasma from dogs given Dicumarol have a shorter prothrombin time than either one alone</i>	109
<i>d. Experiment 4. Parahemophilia is recognized</i>	110
<i>e. Experiment 5. Prothrombin activates to form a derivative and lung thromboplastin seems to be "consumed"</i>	111
<i>f. Experiment 6. Serum contains procoagulant material that functions with lung extract thromboplastin</i>	113
<i>g. Experiment 7. Thromboplastin generation test</i>	114
<i>h. Experiment 8. A laboratory test is invented</i>	117
<i>i. Experiment 9. Prothrombin concentration is determined quantitatively</i>	118
<i>j. Experiment 10. Tissue extracts are toxic</i>	119
<i>k. Toxicity of lung thromboplastin in mice</i>	120
I. Summary	121

Chapter 7. Prothrombin and Accessory Factors	124
A. General Remarks	124
B. Factor VII (Autoprothrombin I)	126
C. Procoagulant Activity from Purified Prothrombin Preparations	127
D. Mitochondria Preparations and Factor VII	129
E. Mitochondria Preparations and Purified Prothrombin	131
F. Preliminary Summary	135
G. Factor VII "Adsorption"	136
H. Metabolic Aspects Related to Prothrombin Derivatives	137
I. Factor VII and More Factors	140
a. <i>Stuart-Prower factor</i>	140
b. <i>Hageman trait</i>	141
c. <i>Thrombocytopenia</i>	141
J. Summary	143
Chapter 8. Prothrombin and Platelet Cofactors	145
A. Recognition of Platelet Cofactor I	146
B. Presence in Plasma of Inhibitor Source Material (ISM) for Platelet Cofactor I	147
C. Purification of Platelet Cofactor I and Related Observations	150
D. Purification of Platelet Cofactor I from Bovine Plasma	155
E. Assay for Platelet Cofactor I	158
F. Platelet Factor 3	163
G. Purification of Platelet Factor 3 (Alkjaersig, Abe, and Seegers 1955)	166
H. Platelet Cofactor II (Autoprothrombin II)	166
I. Origin of Platelet Cofactor II (Autoprothrombin II)	170
J. Purification of Autoprothrombin II	174
K. Platelet Cofactors and the Thromboplastin Generation Test	181
L. Assay for Platelet Cofactor Activity	182
M. Summary	183
Chapter 9. Prothrombin Activation and Lipids	186
A. Brain Thromboplastin	187
B. Lipid Procoagulant	188
C. Lipids from Platelets	199
D. Lipid Portion of Platelet Factor 3	200
E. Lipids, Nutrition, and Procoagulants of Blood	202
F. Structure of Some Lipids Concerned with Prothrombin Activation	209
G. Summary	210

CONTENTS

xix

Chapter 10. Prothrombin Activation and Ac-Globulin	213
A. Determination of Ac-Globulin Activity	214
<i>a. Two-stage method of Ware and Seegers</i>	215
<i>b. Standardization of prothrombin</i>	216
<i>c. Assay procedure</i>	216
<i>d. Analytical results</i>	217
B. Assay for Ac-Globulin and/or Accelerator by Method of Carter and Warner	217
<i>a. Lung extract thromboplastin</i>	217
<i>b. Heated lung extract thromboplastin for use in two-stage prothrombin and Ac-globulin assay</i>	218
<i>c. Incubation mixture</i>	218
<i>d. Preparation of Ac-globulin free plasma containing prothrombin</i>	218
<i>e. Testing of Ac-globulin free plasma for prothrombin</i>	218
<i>f. Testing for Ac-globulin in prothrombin source</i>	219
<i>g. Ac-globulin assay in human plasma</i>	219
<i>h. Ac-globulin assay in rat and dog plasma</i>	219
<i>i. Example</i>	219
<i>j. Calculation of Ac-globulin activity</i>	220
<i>k. Calculations</i>	220
<i>l. Analytical separation of Ac-globulin from autoprothrombin in human blood</i>	222
C. Use of Purified Prothrombin for Ac-Globulin and/or Accelerator(s) Assay by Carter and Warner	223
D. Change of Plasma Ac-Globulin to Serum Ac-Globulin in Presence of Thrombin	224
E. Bovine Plasma Compared with Bovine Serum	226
F. Amount of Thrombin for Activation of Plasma Ac-Globulin	229
G. Stability of Bovine Serum Ac-Globulin	232
H. General Remarks	232
I. Quantity of Ac-Globulin in Plasma and Serum of Different Species	234
J. Stability of Bovine Plasma Ac-Globulin	236
K. Stability of Human Plasma Ac-Globulin	236
L. Ac-Globulin in Platelets	241
M. Purification of Ac-Globulin	242
N. Alteration of Ac-Globulin Titer by Factor VII	247
O. Summary	248
Chapter 11. Prothrombin Activation and Platelets	250
A. Platelet-"Free" Plasma	251

B. Contribution of Platelets to Changes in Physical and Chemical State of Medium	256
C. Substances Derived from Platelets	263
<i>a. Platelet factor 1</i>	265
<i>b. Platelet factor 2</i>	267
<i>c. Platelet factor 3</i>	267
<i>d. Platelet factor 4</i>	270
<i>e. Platelet factor 5</i>	271
<i>f. Platelet factor 6</i>	272
<i>g. Platelet factor 7</i>	273
<i>h. Procoagulant inhibitor(s) of platelets</i>	274
<i>i. Fibrin stabilizing factor</i>	274
D. Separation of Platelets	276
E. Procurement of Bovine Platelets in Large Quantities	278
F. Metal Ions and Reversible Platelet Aggregation	281
G. Summary	282
Chapter 12. Inactivation of Thrombin	285
A. Antithrombin-I	286
B. Adsorption of Thrombin on Glass	288
C. Antithrombin-III	290
<i>a. General perspective</i>	290
<i>b. Fundamental variables further considered</i>	296
<i>c. Stability of antithrombin</i>	299
<i>d. Recovery of thrombin activity</i>	301
<i>e. Neutralization of esterase activity</i>	303
<i>f. Quantitative measurement of antithrombin-III activity</i>	305
<i>g. Miscellaneous remarks about assay for antithrombin</i>	306
<i>h. Survey of human plasma antithrombin activity</i>	308
D. Antithrombin-II	309
E. Antithrombin-IV	312
<i>a. Thrombin titer test</i>	313
F. Antithrombin-V	317
G. Antithrombin-VI	317
H. Summary	318
Chapter 13. Fibrinogen: Principal Substrate of Thrombin	320
A. Purification of Bovine Fibrinogen	321
B. Alcohol Fractionation	324

CONTENTS

xxi

C. Electrophoresis of Fibrinogen and Certain Fibrinogen Derivatives	325
<i>a. Separation of the α-derivative</i>	327
D. Tensile Strength of Fibrin	329
E. Analytical Methods	330
F. Properties of Fibrinogen	332
G. Structure of Fibrinogen and Fibrin	334
H. Summary	336
Chapter 14. A Comprehensive Perspective	338
A. General Statement of Prothrombin Activation	338
B. Thrombin as Catalyst	343
C. Partial Activation of Prothrombin	345
D. A Prothrombin Activation Sequence	346
E. Anatomic Location of Procoagulants	347
<i>a. Plasma compartment</i>	347
<i>b. Platelet compartment</i>	348
<i>c. Tissue compartment</i>	348
F. Pairs of Anatomic Compartments and Prothrombin Activation	349
<i>a. Platelet and plasma compartments (intrinsic mechanisms)</i>	349
<i>b. Platelet and tissue compartments</i>	350
<i>c. Plasma and tissue compartments (extrinsic mechanisms)</i>	351
<i>d. Erythrocytes</i>	352
G. Continuous Prothrombin Activation	352
H. General Function of Anticoagulants	354
I. Relation of Prothrombin Derivatives to Prothrombin Activation	355
J. Preliminary Consideration of Some Structural Aspects Related to Prothrombin	357
K. Initiation of Prothrombin Activation	359
Chapter 15. Anticoagulants	362
A. Heparin	363
B. Heparinase	365
C. Antithromboplastin	366
D. Thromboplastinase	366
E. "Anticephalin"	367
F. Sphingosine	367
G. Inhibitor Source Material (ISM) in Plasma and Serum	368
H. Proteolytic Inhibitor	370
I. Poly- α -Amino Acids	371
J. Hirudin	372

K. Fibrinogen and Fibrin	375
L. α_1 -Acid Glycoprotein	376
M. Rare Earths	377
N. Anti-"Plasma Thromboplastin"	378
O. Autoprothrombin II-A	378
P. Summary	380
Chapter 16. The Nature of Thrombin	382
A. Esterase and Clotting Activity	383
B. Biothrombin and Resin Thrombin	386
<i>a. Nature of biothrombin</i>	386
<i>b. IRC-50(XE-64) and separation of thrombin</i>	387
<i>c. Phosphate cellulose and separation of thrombin</i>	389
<i>d. Citrate thrombin compared with thrombin from other activations of prothrombin</i>	390
<i>e. Amino acids in thrombin</i>	391
C. Acetylated Thrombin	394
<i>a. Acetylated thrombin from thrombin-C</i>	394
<i>b. Preliminary pharmacology of thrombin-E</i>	396
<i>c. Acetylated thrombin from acetylated prothrombin</i>	398
D. Stability of Thrombin-C	400
<i>a. Carbohydrates and glycerol</i>	400
<i>b. Effect of chemicals</i>	402
E. Drying and Dialysis of Thrombin	408
F. Analysis for Thrombin Activity	409
G. Measurement of Clotting or Thrombin-C Activity	410
H. Measurement of Esterase Activity in Thrombin-C and Thrombin-E	414
I. Thrombin Potential of Plasma (Prothrombin Analysis)	417
1. REAGENTS	418
<i>a. Lung extract thromboplastin</i>	418
<i>b. Acacia and calcium</i>	419
<i>c. Imidazole</i>	419
<i>d. Thrombin for defibrination</i>	419
<i>e. Bovine serum</i>	419
<i>f. Fibrinogen</i>	420
<i>g. Drawing of blood</i>	420
2. PROCEDURE TO DETERMINE THROMBIN POTENTIAL (PROTHROMBIN) OF PLASMA	420
<i>a. Defibrination</i>	420
<i>b. Dilution and addition of Ac-globulin</i>	420

CONTENTS

xxiii

c. <i>Generation of thrombin</i>	420
d. <i>Clotting of fibrinogen to measure thrombin formation</i>	420
e. <i>Calculation</i>	421
f. <i>Composition of mixtures used in assay for prothrombin and thrombin</i>	422
g. <i>Data and calculations</i>	423
h. <i>Remarks</i>	425
J. Ultimate Standard for Prothrombin and Thrombin	425
K. Free Thrombin and Thrombin Potential of Clotting Blood and Serum	427
L. Thrombin Potential of Serum	429
M. Some Variables Influencing Thrombin Yield from Prothrombin Preparations	430
a. <i>Effect of pH</i>	430
b. <i>Calcium requirements</i>	431
c. <i>Strontium to replace function of calcium</i>	431
d. <i>Magnesium or barium to replace function of calcium</i>	433
e. <i>Sodium chloride inhibition</i>	433
f. <i>Magnesium inhibition</i>	433
g. <i>Ammonium sulfate inhibition</i>	433
h. <i>Thrombin potential of purified prothrombin</i>	434
N. Selection of Agents for Developing Thrombin Potential of Purified Prothrombin	434
O. History of Iowa Prothrombin Unit	435
P. Molecular Weight of Thrombin	437
Q. Review of Terminal Amino Acids	439
R. Summary	440
Chapter 17. Thrombin and the Formation of Fibrin	444
A. Clotting of Fibrinogen	445
B. Some Characteristics of Fibrinogen	447
C. Formation of Fibrin	448
D. Thrombin as Polymerase	454
a. <i>Polymerization of fibrin monomer with thrombin</i>	454
b. <i>Polymerization time with thrombin</i>	455
c. <i>Relation of fibrinogen clotting time to fibrinogen concentration</i>	455
E. Lysis of Fibrin Clots with Thrombin	456
F. Fibrin Stabilizing Factor	458
G. Paracoagulation	460
H. Staphylocoagulation and Prothrombin	462
I. Summary	463

Chapter 18. Thrombin and Clot Retraction	466
A. General Experimental Considerations	471
<i>a. Temperature</i>	472
<i>b. Cell volume</i>	472
<i>c. Surface contact</i>	473
<i>d. pH of solutions</i>	473
<i>e. Fibrinogen</i>	474
<i>f. Thrombin concentration</i>	475
<i>g. Calcium ion concentration</i>	475
<i>h. Platelet concentration</i>	476
<i>i. Storage of platelets</i>	476
<i>j. Dialysis, ultrasonic treatment, and freezing</i>	477
B. Mixtures of Platelets and Purified Fibrinogen	479
<i>a. Dialyzable plasma factor(s)</i>	480
<i>b. Protein factor(s) of plasma and clot retraction</i>	483
C. Reconsideration of Variables in Clot Retraction	484
D. Actomyosin-like Protein	486
E. Summary	489
Chapter 19. Prothrombin Activation and Calcium Ions	490
A. Calcium Is Not Necessary	491
B. Calcium and Fibrinogen	491
C. Calcium and Prothrombin Activation	492
D. Calcium and Generation of Thrombin	494
E. Summary	495
Chapter 20. Prothrombin and Vitamin K	497
A. Nature of Vitamin K	498
B. Prothrombin Deficiency and Bleeding Tendency in Obstructive Jaundice and Biliary Fistula	500
C. Prothrombin Deficiency in Biliary Fistula	501
D. Prothrombin in Chicken Blood	505
E. Prothrombin and Liver Function	508
F. Prothrombin Concentration of the Newborn Infant	509
G. Prothrombin in Pernicious Anemia	510
H. Metabolism of Vitamin K	511
I. Summary	514

CONTENTS

xxv

Chapter 21. Prothrombin and Oral Anticoagulants	516
A. Nature of Oral Anticoagulants	517
B. Platelet Cofactor Assay	518
<i>a. Method</i>	518
<i>b. Normal plasma</i>	520
<i>c. Normal serum</i>	520
<i>d. Species differences</i>	520
C. Platelet Cofactor Assay Applied to Plasma and Serum from Persons Taking Dicumarol	522
D. Platelet Cofactors and Prothrombin during Use of Oral Anticoagulants	523
E. Autoprothrombin I (Factor VII), Prothrombin, and Autoprothrombin II (Platelet Cofactor II, Factor IX) during Use of Oral Anticoagulants	527
F. Relation of Other Drugs to Prothrombin and Attempt to Correlate Effects	531
G. Summary	533
Chapter 22. Prothrombin and Selected Hemorrhagic Diseases	535
A. General Survey	537
B. Aspects Relating to Contemporary History	538
C. Production of Acute Fibrinogen Deficiencies	541
D. Diseases Involving Plasma Components	542
<i>a. Patient Kincaid</i>	543
<i>b. Patient Christmas</i>	544
<i>c. PTA deficient patient</i>	548
<i>d. Hemophilia A patients</i>	550
<i>e. General comments</i>	551
<i>f. Addition of purified platelet cofactor I and/or purified platelet factor 3 to plasma</i>	552
<i>g. Addition of purified platelet cofactor II (autoprothrombin II) to plasma</i>	555
E. Hemorrhagic Tendencies Involving Platelet Factor 3	556
<i>a. Measurement of platelet factor 3 activity</i>	556
<i>b. General nature of platelet factor 3 deficiency</i>	558
<i>c. Thrombocytopathy</i>	558
<i>d. Macroglobulinemia and platelet factor 3</i>	562
<i>e. Uremia and platelet factor 3</i>	562
<i>f. Dextran and platelet factor 3</i>	564

F. Schematic Representation of Clotting Mechanisms Related to Selected Hemorrhagic Diseases	565
G. Summary	567
Chapter 23. Immunochemistry of Prothrombin and Thrombin	569
A. Prothrombin	570
B. Thrombin	571
C. Fluorescent Antibodies and Prothrombin	575
D. Summary	579
Chapter 24. Thrombin as Hemostatic Agent	581
A. Thrombin in Practical Packages	582
B. Use of Thrombin	583
C. Pharmacology of Thrombin	586
D. Gelatin Sponge as Hemostatic Agent	589
E. Oxidized Cellulose as Hemostatic Agent	591
F. Summary	592
Chapter 25. Prothrombin from Molecular to Higher Integration	594
A. Equilibrium Conditions in Trace Protein Interactions	595
B. Equilibrium from Another Perspective	598
C. Prothrombin Activation Sequence	599
D. Hemostasis and Prothrombin	601
E. Summary	606
Chapter 26. Postscript: Prothrombin and Autoprothrombin C	608
Appendix. Half a Century before Prothrombin	615
Notes	635
References	659
Index	715
