Foreword by I. Bernard Cohen xxi

1. Introduction: The Hidden Key	1
2. Newton: or Chemistry, Forces, and the Structure of Matter	8
2.1. The Importance of Newton	8
2.2. The Problem of Editions and Chronology	11
2.3. The Internal Structure of Matter	12
2.3.1. The <i>Principia</i>	14
2.3.2. The <i>Opticks</i>	18
2.3.3. The <i>De Natura Acidorum</i>	24
2.4. The Ether	26
2.5. Interparticle Forces	32
2.6. Summary and Prospect	39
3. The Immediate Impact of Newton's Ideas	43
3.1. Introduction	43
3.2. Gregory, Pitcairne, and the Beginnings of Discipleship	45
3.3. Cheyne, Mead, and the Medical Tradition	49
3.4. The Keills, Freind, and Leibnizian Warfare	52
3.4.1. The "Nut-Shell" Theory	53
3.4.2. The Theoretical Discussion of Forces	67
3.5. Early Experimental Physical Chemistry	74

Contents

4. The Spread of Newtonianism: A Tradition Established	83
4.1. Introduction	83
4.2. Newtonianism in France	84
4.2.1. Early Contacts	85
4.2.2. Visits, Controversy, and Newtonian Chemistry	88
4.2.3. Newtonianism Established	95
4.3. Newtonianism in Holland	101
4.3.1. 'sGravesande	101
4.3.2. Musschenbroek	105
4.3.3. Boerhaave	106
4.4. Newtonianism Established in Chemistry	113
4.5. Some General Remarks	121
5. Speculative Systems	124
5.1. Introduction	124
5.2. Robert Green and Expansive and Contractive Forces	126
5.3. The Ether, Electricity, Magnetism, and Heat	134
5.3.1. Bryan Robinson and the Medical Tradition	135
5.3.2. Gowin Knight: Attractive and Repulsive Matter	141
5.3.3. Cleghorn and Caloric	147
5.4. R. J. Boscovich and the <i>Theoria Philosophiae Naturalis</i>	150
5.5. Clairaut, Buffon, and the Law of Attraction	155
6. The Problem of the Elements	161
6.1. Introduction	161
6.2. Chemical Elements and Mechanical Philosophy	162
6.3. Homberg, Stahl, and Chemical Tradition	165
6.4. Particle Size and the "Nut-Shell" Theory	176
6.5. Elements and Atoms in Dutch and British Chemistry	179
6.6. The French Situation	192
7. Quantified Chemistry: The Newtonian Vision	199
7.1. Introduction	199
7.2. The Battle for Quantification	202
7.2.1. Buffon and the French School	205
7.2.2. Torbern Bergman	218
7.2.3. Wenzel and Richter	221
7.2.4. The British Effort	223
7.3. The Fading Vision	230

8. British Popular Newtonianism and the Birth of the <i>New System</i>	234
8.1. The Popular Lecturing Tradition	234
8.2. Number Games and the Conceptualization of Chemical Composition	238
8.3. Matter-Theory and Theology	244
8.4. John Dalton's Scientific Education	252
8.5. The Origins of the Chemical Atomic Theory	256
8.6. A New System of Chemical Philosophy?	269
8.6.1. Chemical Units	270
8.6.2. Chemical Mechanisms	275
9. Conclusion	279
Bibliographic Note	285
Select Bibliography	287
Index	319

Figures

I	Homogeneous <i>v.</i> heterogeneous matter	19
II	The possibility of transmutation	25
III	Pitcairne to Gregory in 1707	47
IV	Newton revises the <i>Opticks</i>	63
V	The internal structure of matter	64
VI	Geoffroy's affinity table	91
VII	Boscovich's force-curve	153
VIII	Musschenbroek on internal structure	181
IX	Cullen's "quantification" of chemical mechanism	227
X	Dalton's illustration of his 1801 "theory of mixed gases"	260
XI	Dalton's view of chemical combination	265
	<i>following page</i>	266
XII	Dalton's wooden atomic models	
XIII	Modern atomic models	

Table

I	Newton's works on natural philosophy	12
