Contents

1 General considerations 1

2 Fundamentals of equilibrium and nonequilibrium thermodynamics 5

3 Relationships between flows and forces: the Kedem-Katchalsky equations 24

4 Effectiveness of energy conversion 54

5 The diagram method 74

6 Possible conditions for linearity and symmetry of coupled processes far from equilibrium 96

7 Energetics of active transport: theory 132

8 Energetics of active transport: experimental results 168

9 Kinetics of isotope flows: background and theory 215

10 Kinetics of isotope flows: mechanisms of isotope interaction 246

11 Kinetics of isotope flows: tests and applications of thermodynamic formulation 274

12 Muscular contraction 301

13 Energy coupling in mitochondria, chloroplasts, and halophilic bacteria 348
