

List of Figures

- 1-1. Modern political units in eastern Mesoamerica, 3
- 1-2. The Graz photographic facsimile of the Dresden Codex, 5
- 2-1. Sketch diagram illustrating the concept of horizon coordinates, 32
- 2-2. Sketch diagram illustrating the relationship of the ecliptic to the celestial equator, 33
- 2-3. Hypothetical local eastern horizon in north-central Yucatan, 35
- 2-4. Locations relative to the Earth and the Sun of Venus and Mars at the synodic stations indicated, 38
- 2-5. Ecliptic longitude of Mars plotted at 10-day intervals between 13 November AD 899 (Gregorian) and 6 June AD 903, 41
- 2-6. Sketch (not to scale) of the night-to-night movement in the sky of Mars just before, during, and just after its retrograde period in AD 901–902, 42
- 2-7. Ecliptic longitude of Venus plotted at 10-day intervals between 12 January AD 900 (Gregorian) and 21 June AD 902, 42
- 2-8. Locations relative to the Earth and the Sun of Venus at the observable synodic stations indicated, 44
- 2-9. Sketch diagram of an *mfirst* (heliocal rise) of Venus, a horizon Phenomenon, 44
- 2-10. Sky position (azimuth and altitude) of Venus as “morning star” at Sunrise, plotted at 10-day intervals between *mfirst* and *mlast* in AD 901–902, 45
- 2-11. Sketch diagram of an *efirst* of Venus, a horizon phenomenon, 45
- 2-12. Sky position (azimuth and altitude) of Venus as “evening star” at Sunset, plotted at 10-day intervals for Bonampak (Chiapas, Mexico) between *efirst* and *elast* in AD 683, 46
- 2-13. Locations relative to the Earth and the Sun of Mars at the observable synodic stations indicated, 46
- 2-14. Phases of the Moon shown in their positions in lunar orbit, 51
- 2-15. Phases of the Moon as seen from Earth, 51
- 2-16. Sketch section, drawn perpendicular to the plane of the ecliptic, showing the angular relationship between the lunar orbit and the ecliptic, 52
- 2-17. Relationship between the plane of the lunar orbit and the plane of the ecliptic, 53
- 2-18. Diagrams, drawn perpendicular to the plane of the ecliptic, of the relationship of the Earth’s shadow to several kinds of lunar eclipses, 56
- 2-19. Diagrams, drawn perpendicular to the plane of the ecliptic, of the relationship of the Moon’s shadow to several kinds of solar eclipses, 57
- 2-20. Solar corona at the maximum of a total solar eclipse, photographed by David A. Rosenthal in central Hungary, ca. 13:00 local time, on 11 August AD 1999, 58
- 2-21. The night sky at midnight on 22 June AD 901 (Gregorian), the first summer solstice of the tenth century, at 20° 30' N, 88° 30' W, 60
- 2-22. The night sky at midnight on 21 December AD 901 (Gregorian), the first winter solstice of the tenth century, at 20° 30' N, 88° 30' W, 61
- 2-23. Approximate configuration of the Milky Way at midnight on 22 June, the summer solstice of AD 901, at 20° 30' N, 88° 30' W, 62
- 2-24. Approximate configuration of the Milky Way at midnight on 21 December, the winter solstice of AD 901, at 20° 30' N, 88° 30' W, 63
- 2-25. Approximate configuration of the Milky Way at midnight on 20 March, the vernal equinox of AD 901, at 20° 30' N, 88° 30' W, 65
- 3-1. Maya bar-and-dot numbers, 66
- 3-2. An example of Maya positional notation, 67
- 3-3. Maya numbers written using positional notation, 67
- 3-4. Codical glyphs for the months of the 365-day *haab*, 68

- 3-5. Codical variants of day signs, 71
- 3-6. Codical variants of period glyphs, 72
- 3-7. An example of a truncated date on page D.73a of the Dresden Codex, 72
- 3-8. An example of a *tun*-Ahau date on Lintel 4 of the Temple of the Four Lintels at Chichen Itza, 73
- 3-9. An example of a ring number on page D.70 of the Dresden Codex, 75
- 3-10. An example of a serpent number on page D.62 of the Dresden Codex, 76
- 5-1. The six codical instruments located in whole or in part on pages M.103 and M.104 of the Madrid Codex, 101
- 5-2. The almanac on pages D.13b and D.14b of the Dresden Codex, 102
- 5-3. The standard format of almanacs in the Maya codices, 102
- 5-4. Analysis of the collocations at D1 and H2 in the almanac depicted in Figure 5-2, 103
- 5-5. The almanac on pages D.30b–D.31b of the Dresden Codex, 105
- 5-6. The location of astronomical tables in the Dresden Codex, 106
- 5-7. One page, D.54, of the eight-page eclipse table in the Dresden Codex, 106
- 5-8. The synodic Mars table on pages D.43b–D.45b of the Dresden Codex, 107
- 5-9. Hypothetical example of a damaged page of a modern printed calendar intended for use in the United States of America, 109
- 6-1. Gods A, A', and B, 112
- 6-2. Gods C, D, and E, 113
- 6-3. Gods G, H, and CH, 114
- 6-4. Goddess I and Gods K and L, 115
- 6-5. Gods M and N and Goddess O, 116
- 6-6. Gods P, Q, and R, 117
- 6-7. Gods S, X, Y, and Z, 118
- 6-8. Old god, Moon goddess, and Lahun Chan, 119
- 6-9. Pictures of Central Mexican gods in the Venus table of the Dresden Codex, 119
- 6-10. The cross on the east side of the southern entrance into Ebtun, Yucatan, in 1979, 121
- 6-11. The cross on the west side of the southern entrance into Ebtun, Yucatan, in 1979, 121
- 6-12. Page D.25 of the Dresden Codex, 125
- 6-13. Page D.26 of the Dresden Codex, 127
- 6-14. Page D.27 of the Dresden Codex, 128
- 6-15. Page D.28 of the Dresden Codex, 129
- 6-16. Stela 3 at Bonampak, Chiapas, 132
- 6-17. The hieroglyphic text on the Leyden Plate, 136
- 6-18. Agreement between the variable element (*kin*) in the Initial Series Introductory Glyph on the Leyden Plate and the month name (Yaxkin), 137
- 6-19. Page M.34 of the Madrid Codex, 138
- 6-20. Page M.35 of the Madrid Codex, 140
- 6-21. Page M.36 of the Madrid Codex, 141
- 6-22. Page M.37 of the Madrid Codex, 142
- 6-23. The Burner almanac on pages D.30b–D.31b of the Dresden Codex, 146
- 7-1. Monthly rainfall averages for Porvenir, Peten, Guatemala; Champoton, Campeche, Mexico; and Merida, Yucatan, 151
- 7-2. Monthly rainfall averages for Corozal, Belize, and Valladolid, Yucatan, Mexico, 151
- 7-3. Geological and botanical features pictured in the Dresden Codex, 153
- 7-4. Types of forest in the Mexican portion of the Yucatan peninsula, 155
- 7-5. Use of a dibble stick in planting, 157
- 7-6. Agricultural hieroglyphs, 157
- 7-7. Bean plants, 157
- 7-8. Signs for **mu** and **bu** in Maya hieroglyphs, 158
- 7-9. Deities holding seeds in the almanac on page M.28d of the Madrid Codex, 158
- 7-10. The planting almanac on pages D.15b–D.16b of the Dresden Codex, 159
- 7-11. Worms and a black bird attacking God E in the almanac on page M.24d of the Madrid Codex, 160
- 7-12. A black bird and an opossum eating seeds in the almanac on pages M.27b–M.28b of the Madrid Codex, 161
- 7-13. The bee almanac on pages M.108c–M.109c of the Madrid Codex, 162
- 8-1. The first half (pages D.24, D.46, and D.47) of the Venus table in the Dresden Codex, 164
- 8-2. The second half (pages D.48, D.49, and D.50) of the Venus table in the Dresden Codex, 165
- 8-3. Zones I through X of the Venus table of the Dresden Codex, as defined and discussed in the text, 165
- 8-4. Calendrical elements in the introduction to the Venus table, in Zone I on page D.24, 166
- 8-5. The glyphic text in the introduction to the Venus table, in Zone I on page D.24, 168
- 8-6. The table of multiples in the introduction to the Venus table, in Zone II on page D.24, 169
- 8-7. The fourth or “mfirst” column on page D.50 of the Venus table, extending through Zones III, IV, V, VI, and VII, 172

- 8-8. Deviation scores (date of canonical mfirst minus probable date of actual mfirst) for Venus heliacal rise events tabulated in three versions of the Venus table of the Dresden Codex beginning on a day 1 Ahau 18 Kayab, 184
- 8-9. Deviation scores (date of canonical mfirst minus probable date of actual mfirst) for Venus heliacal rise events tabulated in the 1 Ahau 18 Kayab version of the Venus table beginning in AD 934, 184
- 8-10. Deviation scores (date of canonical mfirst minus probable date of actual mfirst) for Venus heliacal rise events tabulated in the 1 Ahau 18 Uo version of the Venus table beginning in AD 922, 186
- 8-11. Deviation scores (date of canonical mfirst minus probable date of actual mfirst) for Venus heliacal rise events tabulated in two versions of the Venus table beginning on a day 1 Ahau 18 Uo, 186
- 8-12. Deviation scores (date of canonical mfirst minus probable date of actual mfirst) for Venus heliacal rise events tabulated in two versions of the Venus table beginning on a day 1 Ahau 13 Mac, 187
- 8-13. Deviation scores (date of canonical mfirst minus probable date of actual mfirst) for Venus heliacal rise events tabulated in two versions of the Venus table beginning on a day 1 Ahau 3 Xul, 187
- 8-14. References to God A on pages D.46 and D.47 of the Dresden Codex, 190
- 8-15. The upper picture and its caption (Zone VIII of the Venus table) on page D.46 of the Dresden Codex, 191
- 8-16. The upper picture and its caption (Zone VIII of the Venus table) on page D.47 of the Dresden Codex, 192
- 8-17. The upper picture and its caption (Zone VIII of the Venus table) on page D.48 of the Dresden Codex, 192
- 8-18. The upper picture and its caption (Zone VIII of the Venus table) on page D.49 of the Dresden Codex, 193
- 8-19. The upper picture and its caption (Zone VIII of the Venus table) on page D.50 of the Dresden Codex, 193
- 8-20. References to Hun Ahau and God E on pages D.49 and D.50 of the Dresden Codex, 194
- 8-21. The middle and lower pictures and their captions (Zones IX and X of the Venus table) on page D.46 of the Dresden Codex, 195
- 8-22. The middle and lower pictures and their captions (Zones IX and X of the Venus table) on page D.47 of the Dresden Codex, 195
- 8-23. The middle and lower pictures and their captions (Zones IX and X of the Venus table) on page D.48 of the Dresden Codex, 196
- 8-24. The middle and lower pictures and their captions (Zones IX and X of the Venus table) on page D.49 of the Dresden Codex, 196
- 8-25. The middle and lower pictures and their captions (Zones IX and X of the Venus table) on page D.50 of the Dresden Codex, 197
- 8-26. Syllabic spellings of the names of three Central Mexican gods mentioned in the Venus table of the Dresden Codex, 198
- 8-27. Contexts in which *ch'ab-akab* appears with and without pronominal prefixes, 198
- 8-28. Use of a stone projectile and a stone-tipped spear as weapons, depicted on page M.54c, 201
- 8-29. Burdens carried by the yearbearers on three of the Uayeb pages of the Dresden Codex, 204
- 8-30. The gods named in the third column of glyphs on page D.24, 205
- 8-31. Distance number conventions and another use of the *u* glyph, 209
- 8-32. The Venus almanac on pages G.1 to G.10/11 of the Grolier Codex, 221
- 8-33. Some examples of the ways numbers are written in Maya codices and inscriptions, 222
- 8-34. Page G.6 of the Grolier Codex, representing an efirst station of Venus, 224
- 8-35. The Aztec Venus deity Tlahuizcalpantecuhtli, Lord of the Dawn, as depicted on page 14v of the Codex Telleriano-Remensis, wearing a headdress mask comprised of a "toothy skull" with a flint knife wedged into the nasal aperture, 227
- 8-36. Representations of Venus as death god portrayed as a "toothy skull" with a flint knife wedged into the nasal aperture, 227
- 8-37. Warrior depicted as a "toothy skull" with a stone knife in the nasal aperture, on the south side of column 9 of the Northwest Colonnade at Chichen Itza, 228
- 8-38. Eagle-legged warrior on the south side of column 55 of the Northwest Colonnade at Chichen Itza, 229
- 8-39. The *katun* page, D.60, in the Dresden Codex, 233
- 8-40. The Venus-Mercury almanac on pages D.30c–D.33c of the Dresden Codex, 236
- 8-41. "Star war" collocations, 247
- 9-1. The first four pages, D.51–D.54, of the eclipse table of the Dresden Codex, 250
- 9-2. The last four pages, D.55–D.58, of the eclipse table of the Dresden Codex, 251
- 9-3. Zones I through VI of the eclipse table of the Dresden Codex, as defined and discussed in the text, 252
- 9-4. The base dates of the eclipse table, in Zone I on page D.51a, 252
- 9-5. Alternative spellings of *lobal* 'bad, evil' in the Dresden Codex, 253

- 9-6. The table of multiples of the eclipse table, in Zone III on pages D.51a–D.52a, 253
- 9-7. Correction quantities for recycling the eclipse table, in Zone IV on pages D.52a, 254
- 9-8. Entry dates for the eclipse table, in Zone V on page D.52a, 254
- 9-9. Relationship of the three entry dates of the eclipse table to the eclipse season of November–December AD 755, defined as the day of lunar nodal passage ± 18 days, 255
- 9-10. Possible corrections of the erroneous date, 9.19.8.7.8 7 Lamat, in Zone V on page D.52a, 256
- 9-11. Two of the 69 columns of Zone VI of the eclipse table; examples shown are column 3, from page D.53a, and column 69, from page D.58b, 257
- 9-12. Astronomical model of Guthe, showing how the deviation in days between multiples of eclipse seasons and multiples of lunar months requires a mix of six-lunar-month and five-lunar-month groups in order to achieve an optimal commensuration, 265
- 9-13. Deviations between eclipse seasons and lunar-month groupings graphed in the same fashion as in Figure 9-12 but using the actual 177-, 178-, and 148-day groupings of the 69 columns of the eclipse table, 265
- 9-14. Teeple's *tzolkin* wheel, showing that the tabulated *tzolkin* dates of the eclipse table fall into three restricted sections, A, B, and C, of a complete 260-day cycle, 267
- 9-15. A wheel composed of a 520-day double *tzolkin*, on which the tabulated dates of the eclipse table fall into three restricted sections, #1, #2, and #3, as on Teeple's wheel, 267
- 9-16. Illustration of how Teeple determined (erroneously) that *tzolkin* day 167 (11 Manik) was a day of lunar nodal passage, 268
- 9-17. Location of eclipse seasons, defined as node day ± 18 days, with respect to the 31-day intervals of the eclipse table (entry dates and columns 1 through 14 of the 12 Lamat Original multiple), 283
- 9-18. Location of the 31-day intervals of the 12 Lamat Original version of the eclipse table (entry dates and columns 1 through 69) with respect to eclipse seasons, 286
- 9-19. Relationship between tabulated Dates A and C of the 12 Lamat Original multiple of the eclipse table and actual solar eclipse dates, plotted with reference to the day of lunar nodal passage, 288
- 9-20. Relationship between Date B occurrences tabulated in the 12 Lamat Original multiple of the eclipse table and actual lunar eclipse dates, plotted with reference to the day of lunar nodal passage, 288
- 9-21. Relationships between the same lunar eclipse data shown in Figure 9-20, with the addition of a completely hypothetical "Date D," 30 days after the real Date B, 289
- 9-22. Location of the 31-day intervals of the 3 Cauac 6th multiple of the eclipse table with respect to eclipse seasons, 295
- 9-23. Relationship between tabulated Dates A and C of the 3 Cauac 6th multiple of the eclipse table and actual solar eclipse dates, 295
- 9-24. Astronomical signs in the eclipse table of the Dresden Codex and other sources, 301
- 9-25. Captions to columns in the eclipse table of the Dresden Codex that refer to the Moon or a lunar month, 302
- 9-26. Glyphs for the lunar month, *u*, or the Moon, also *u*, in the eclipse table of the Dresden Codex, and Landa's second grapheme for "u", 303
- 9-27. Picture 1 and column 3 in the eclipse table of the Dresden Codex and the corresponding captions, 305
- 9-28. Picture 2 and column 13 in the eclipse table of the Dresden Codex and the corresponding captions, 306
- 9-29. Picture 3 and column 19 in the eclipse table of the Dresden Codex and the corresponding captions, 307
- 9-30. Picture 4 and column 26 in the eclipse table of the Dresden Codex and the corresponding captions, 308
- 9-31. Picture 5 and column 36 in the eclipse table of the Dresden Codex and the corresponding captions, 309
- 9-32. Picture 6 and column 42 in the eclipse table of the Dresden Codex and the corresponding captions, 310
- 9-33. Picture 7 and column 49 in the eclipse table of the Dresden Codex and the corresponding captions, 311
- 9-34. Picture 8 and column 58 in the eclipse table of the Dresden Codex and the corresponding captions, 312
- 9-35. Conjunction of Venus and the Moon about one hour after Sunset on 27 February AD 2009, seen about 20° above the western horizon from the archaeological site of Caracol, Belize, 312
- 9-36. Picture 9 and column 65 in the eclipse table of the Dresden Codex and the corresponding captions, 314
- 9-37. Picture 10 and column 69 in the eclipse table of the Dresden Codex and the corresponding captions, 315
- 9-38. The Venus almanac on page 26 of the Borgia Codex, 316
- 9-39. The Venus almanac on page 25 of the Borgia Codex, 317
- 9-40. Captions to columns 1 through 26 in the eclipse table of the Dresden Codex, 321
- 9-41. Captions to columns 27 through 49 in the eclipse table of the Dresden Codex, 322
- 9-42. Captions to columns 50 through 69 in the eclipse table of the Dresden Codex, 323
- 9-43. "Ascending" and "descending" collocations in the Dresden Codex, 324
- 9-44. Glyph of possible astronomical reference in the caption to column 34, on page D.51b, in the eclipse table of the

- Dresden Codex, and similar glyph on the lintel of the east wing of the Monjas at Chichen Itza associated with a date of summer solstice, 327
- 9-45. Picture and glyph, at A1 on page D.36b, of a personage with uplifted arms sitting in the rain, 327
- 9-46. Possible references to Mercury in the eclipse table of the Dresden Codex, 331
- 9-47. Thematically related captions from the three modules of the eclipse table of the Dresden Codex, 333
- 9-48. Paired captions in the eclipse table of the Dresden Codex, 335
- 9-49. The eclipse almanac on pages D.38b–D.41b of the Dresden Codex, with a transcription and expansion of its calendrical structure, 343
- 9-50. The eclipse almanac on pages D.38b–D.41b of the Dresden Codex, 345
- 9-51. Relationships among four eclipse seasons, the five 104-day divisions of the eclipse almanac on pages D.38b–D.41b of the Dresden Codex, and two 260-day *tzolkin* cycles, 348
- 9-52. The first part of the eclipse almanac, with Pictures 1 through 5 and their captions, on pages M.10a–M.11a of the Madrid Codex, with a transcription and expansion of its calendrical structure, 352
- 9-53. The final part of the eclipse almanac, with Pictures 6 through 10 and their captions, on pages M.12a–M.13a of the Madrid Codex, with a transcription and expansion of its calendrical structure, 353
- 9-54. Pages P.4, P.5, and P.10 of the Paris Codex, 358
- 9-55. Portions of the hieroglyphic text on page P.4 of the Paris Codex, 359
- 9-56. Portions of the hieroglyphic text of pages P.5 and P.10 of the Paris Codex, 361
- 9-57. Zodiacal beasts “biting” solar eclipse glyphs, on page P.23 of the Paris Codex, 366
- 10-1. The synodic Mars table on pages D.43b to D.45b of the Dresden Codex, 368
- 10-2. Zones I through V of the synodic Mars table of the Dresden Codex, as defined and discussed in the text, 369
- 10-3. Ring number (17.12) and long round (9.19.8.15.0) in the introduction to the synodic Mars table (Zone I) on page D.43b, 369
- 10-4. The table of multiples of the synodic Mars table in Zone II on pages D.43b–D.44b and a transcription of its contents, 370
- 10-5. The calendrical structure of the synodic Mars table on pages D.44b and D.45b, 371
- 10-6. The apparent night-to-night movement of Mars as tracked against the background of the stars in the months leading up to, during, and following the period of retrograde motion in AD 818, 379
- 10-7. Hours of nightly visibility of Mars in Yucatan (20° 30' N, 88° 30' W) during its synodic period of AD 817–819, 380
- 10-8. The text and pictures of the synodic Mars table, 382
- 10-9. The axe glyph and evidence that it was read as *uac*, 384
- 10-10. Mask-carving almanac on pages M.97b and M.98b of the Madrid Codex, 385
- 10-11. Variation in the length in days of the period of Mars during 41 consecutive synodic cycles between AD 818 and AD 903, 386
- 10-12. The 260-day *tzolkin* cycle represented graphically in a cruciform *in extenso* almanac on pages M.75 and M.76 of the Madrid Codex, 390
- 10-13. Sketch of the zenithal arm (*trecenas* 6, 7, and 8) and the adjacent intercardinal lobes (*trecenas* 4, 5, 9, and 10) of the *tzolkin* diagram in the Madrid Codex shown in full in Figure 10-12, 39
- 10-14. Distribution by *tzolkin* number of Martian heliacal rise dates relevant to the 3 Lamat Original and the subsequent 94 multiples of the Mars table, AD 818–1018, 392
- 10-15. A 780-day synodic cycle of Mars subdivided into three 260-day intervals, each beginning on a day 3 Lamat and containing a significant synodic station, 392
- 10-16. Surviving fragment of a synodic Mars almanac on page M.2a of the Madrid Codex, 395
- 10-17. Text above the lower row of pictures in the synodic Mars almanac on page M.2a of the Madrid Codex, 397
- 10-18. The left half of the water tables, on pages D.69–D.71 of the Dresden Codex, 399
- 10-19. The right half of the water tables, on pages D.72–D.74 of the Dresden Codex, 400
- 10-20. Zones I through VI of the water tables of the Dresden Codex, as defined and discussed in the text, 401
- 10-21. The serpent-number dates in the introduction to the water tables, in Zone I on page D.69, 401
- 10-22. The *pictun* date in the introduction to the water tables, in Zone I on page D.69, 403
- 10-23. Atypical zero signs in the Dresden Codex, compared with some examples of completion signs on Classic period monuments, 403
- 10-24. The *pictun* date in the introduction to the water tables, in Zone I on page D.70, 407
- 10-25. The ring-number dates and accompanying text in the introduction to the water tables, in Zone I at the top of page D.70, 409
- 10-26. The ring-number dates in the introduction to the water tables, in Zone I at the bottom of page D.70, 410
- 10-27. The initial series dates in the introduction to the water tables, in Zone I on page D.70, 410

- 10-28. The truncated initial series dates in the introduction to the water tables, in Zone I on page D.70, 411
- 10-29. The truncated initial series dates and accompanying text in the introduction to the water tables, in Zone I on page D.73a, 411
- 10-30. Calendrical and other structural elements of the upper water table in the rightmost column of page D.73, 414
- 10-31. The table of multiples of the upper water table, in Zone II on pages D.70–D.71, and a transcription of its contents, 415
- 10-32. The table of multiples of the lower water table, in Zone IV on pages D.70–D.71, and a transcription of its contents, 417
- 10-33. The red-ringed numbers on page D.72 of the Dresden Codex as illustrated in 1882 by Cyrus Thomas as part of his discussion of the calendrical structure of the upper water table, 419
- 10-34. Empiric sidereal intervals of Mars in the early eighth century AD, based on 25 sequential observations of Mars at celestial longitude 0°, 422
- 10-35. Seasonal distribution of beginning/ending points of empiric sidereal intervals of Mars in the early eighth century AD (same data set as for Figure 10-34), 423
- 10-36. The hieroglyphic text in the upper water table on pages D.71a–D.73a of the Dresden Codex, 425
- 10-37. Comparison of Martian references in the synodic Mars table and the upper water table, 426
- 10-38. Skymap at Sunrise in Yucatan (20° 30' N, 88° 30' W) on the entry date of the upper water table, 4 December AD 702 (Gregorian), when Mars was in Virgo, 431
- 10-39. Skymap at midnight in Yucatan (20° 30' N, 88° 30' W) on the starting date of the 8th multiple of the upper water table, 20 April AD 718 (Gregorian), when Mars was in Leo, 432
- 10-40. Skymap at Sunrise in Yucatan (20° 30' N, 88° 30' W) on the starting date of the corrected 9th multiple of the upper water table, 4 January AD 720 (Gregorian), when Mars was in Virgo, 435
- 10-41. Sketches, not to scale, of the variation in shapes of retrograde loops of Mars, as discussed in the text, 436
- 10-42. Seasonal variation in the celestial latitude of Mars on dates of opposition during 50 retrograde periods between AD 818 and AD 923, 437
- 10-43. Seasonal distribution of Martian opposition dates relevant to the first ten runs of the upper water table, superimposed on the data plotted in Figure 10-42, 438
- 10-44. The saurian skyband on page D.74 of the Dresden Codex, 442
- 10-45. Gods shown on page D.74 of the Dresden Codex, 443
- 10-46. The text of the lower water table on pages D.71–D.73 of the Dresden Codex, 444
- 10-47. Comparison of vulture and macaw depictions in the Dresden Codex, as discussed in the text, 445
- 10-48. Dawn collocation showing tilted sky, from Tikal, Temple IV, Lintel 2, A7; captions with tilted sky glyph in columns F, T, and B' of the lower water table; and captions with mat and droplet elements in columns N, P, and R of the lower water table, 451
- 10-49. Grouping of captions in the lower water table showing repetition of content every four multiples, 453
- 10-50. Comparison of three captions with smoke prefixes and references to the *tun/haab* in columns E, W, and A of the lower water table, 454
- 10-51. Comparison of text passages on pages D.69 and D.74 of the Dresden Codex, 455
- 10-52. Overlapping references to “red rains” in the upper and lower water tables, 464
- 10-53. References to iguana bread in the Dresden Codex, 468
- 10-54. The incomplete planetary table on pages D.58 and D.59 of the Dresden Codex, 470
- 10-55. Zones I through IV of the incomplete planetary table of the Dresden Codex, as defined and discussed in the text, 471
- 10-56. The introductory text in Zone I of the incomplete planetary table, on page D.58, 471
- 10-57. The ring-number dates in Zone II of the incomplete planetary table, on page D.58, 473
- 10-58. Analysis of the text of the introduction, Zone I, of the incomplete planetary table of the Dresden Codex, 474
- 10-59. Comparison of glyphs for victims in the Venus table and the incomplete planetary table of the Dresden Codex and in an almanac in the Madrid Codex, 475
- 10-60. Glyphs for “foreigner” or “stranger” in the Venus table and the incomplete planetary table of the Dresden Codex, 475
- 10-61. Different functions of the beast with an upturned snout (the T1021 glyph and its iconographic equivalent) in the inscriptions of the Classic period, 485
- 10-62. Textual reference on the middle panel of the Temple of the Inscriptions at Palenque to an event on or about the period-ending date, 9.11.0.0.0 (12 October AD 652, Gregorian), involving both Venus, at A5, and Mars, at A6, 486
- 10-63. References to Mars in inscriptions of the Classic period, 487
- 10-64. Parallel couplet at Palenque referring to Venus and Mars, 487
- 10-65. Sky and earth collocations, 487
- 10-66. Front edge of Bench 1 in the south subterranean building of the Palace at Palenque sculpted in the form of a four-legged beast with an upturned snout, 488

- 10-67. Hieroglyphic inscription on the altar of Stela 13 at Copan, 488
- 11-1. The left half of the seasonal tables, on pages D.61–D.64 of the Dresden Codex, 490
- 11-2. The right half of the seasonal tables, on pages D.65–D.69 of the Dresden Codex, 491
- 11-3. Zones I through IV of the seasonal tables of the Dresden Codex, as defined and discussed in the text, 492
- 11-4. The *pictun* date in the introduction to the seasonal tables, in Zone I on page D.61, 492
- 11-5. The first pair of serpent-number dates and accompanying text in the introduction to the seasonal tables, in Zone I on page D.61, 494
- 11-6. The second pair of serpent-number dates and accompanying text in the introduction to the seasonal tables, in Zone I on page D.61, 495
- 11-7. The third pair of serpent-number dates and accompanying text in the introduction to the seasonal tables, in Zone I on page D.62, 496
- 11-8. Alternative spellings of the name of the fifth month of the *haab*, 497
- 11-9. The fourth pair of serpent-number dates and accompanying text in the introduction to the seasonal tables, in Zone I on page D.62, 497
- 11-10. The first two ring-number dates and accompanying text in the introduction to the seasonal tables, in Zone I on page D.62, 498
- 11-11. The second two ring-number dates and accompanying text in the introduction to the seasonal tables, in Zone I on page D.63, 499
- 11-12. The fifth and sixth (intertwined) ring-number dates in the introduction to the seasonal tables, in Zone I on page D.63, 500
- 11-13. Diagrammatic model of how an error in revising the ring-number series on pages D.62 and D.63 could have resulted in the calendrical offsets observed, as explained in the text, 501
- 11-14. The table of multiples of the seasonal tables, in Zone II on pages D.63 and D.64, 504
- 11-15. Detail of the numerical expression 19.0.4.4 inserted within the 5.1.0 (20 x 91) multiple on page D.63, 505
- 11-16. Schematic diagram of the structure of the upper seasonal table, showing the double sequence of black distance numbers and, in italics, red *tzolkin* coefficients, 507
- 11-17. Inscription on the right edge of Stela 10 at Tikal, showing three calendrical positions (1.11.19) preceding the specification of *baktuns* and the other elements of an initial series date, 510
- 11-18. Portion of the inscription on the west panel of the Temple of the Inscriptions at Palenque referring to a day 10 Ahau 13 Yaxkin (C11–D11) that is one *pictun* (C12) after 4 Ahau 8 Cumku—i.e., 13 October AD 4772 Gregorian, 511
- 11-19. Part of the upper seasonal table, on pages D.65a–D.66a of the Dresden Codex, 515
- 11-20. Part of the upper seasonal table, on pages D.67a–D.69a of the Dresden Codex, 517
- 11-21. Examples of *xib chac* in the Dresden Codex, 518
- 11-22. An inchoative verb derived from *caan* ‘sky’, 519
- 11-23. Part of the lower seasonal table, on pages D.65b–D.66b of the Dresden Codex, 521
- 11-24. Part of the lower seasonal table, on pages D.67b–D.69b of the Dresden Codex, 523
- 11-25. Comparison of T1037 (*xib*) with T1016c (*ku*), 523
- 11-26. Pairs of related pictures in the upper and lower seasonal tables, 525
- 11-27. Analysis of the *itzamna ku* collocation on page D.62, 526
- 11-28. References to Goddess I in the Dresden Codex, 527
- 11-29. Monthly rainfall averages, in millimeters, for Valladolid, Yucatan, Mexico; Chetumal, Quintana Roo, Mexico; and El Porvenir, Peten, Guatemala, 530
- 11-30. Monthly rainfall averages, in millimeters, for Merida, Yucatan, Mexico; Champoton, Campeche, Mexico; and Escarcega, Campeche, Mexico, 530
- 11-31. Relationship between node dates and the four dates associated with eclipse glyphs in the 3 Cib Original multiple of the upper seasonal table and the following 20 multiples, 537
- 11-32. Page D.27, one of the Uayeb pages of the Dresden Codex, 539
- 11-33. Copulation iconography, 543
- 11-34. Schematic representation of the relationships among selected base dates of the upper and lower seasonal tables that are separated by exact or near multiples of the 364-day computing year, CY, 545
- 11-35. Relationships between selected pairs of base dates of the upper seasonal table, 547
- 11-36. The seasonal almanac on pages M.10b and M.11b of the Madrid Codex, with a transcription and expansion of its calendrical structure, 551
- 11-37. The seasonal almanac on pages M.10c and M.11c of the Madrid Codex, with a transcription and expansion of its calendrical structure, 553
- 11-38. The upper seasonal almanac, on pages M.10b–M.11b of the Madrid Codex, 554
- 11-39. The lower seasonal almanac, on pages M.10c–M.11c of the Madrid Codex, 557
- 11-40. Cognate pictures in the seasonal tables of the Dresden Codex and the seasonal almanacs of the Madrid Codex, 559

- 11-41. Comparison of the vegetative bower image on page M.10c of the Madrid Codex with eclipse pictures in the eclipse table of the Dresden Codex, 565
- 11-42. The first page, M.12b, of the almanac on pages M.12b–M.18b of the Madrid Codex, 566
- 11-43. The first three pages, M.13b–M.15b, of the *in extenso* portion of the almanac on pages M.12b–M.18b of the Madrid Codex, 567
- 11-44. The last three pages, M.16b–M.18b, of the *in extenso* portion of the almanac on pages M.12b–M.18b of the Madrid Codex, 567
- 11-45. Examples from the Madrid Codex in which a *tzolkin* coefficient of “1,” a single red dot, is surrounded by a “halo” of much smaller red dots, 568
- 11-46. Part of the *in extenso* almanac on pages M.13b and M.14b of the Madrid Codex, 573
- 11-47. Part of the *in extenso* almanac on pages M.14b and M.15b of the Madrid Codex, 574
- 11-48. Part of the *in extenso* almanac on pages M.15b, M.16b, and M.17b of the Madrid Codex, 575
- 11-49. Part of the *in extenso* almanac on pages M.17b and M.18b of the Madrid Codex, 576
- 11-50. Variants of the “A-O” sign, 577
- 11-51. Tree images in the Madrid Codex, 577
- 11-52. Month collocations in the *in extenso* almanac on pages M.12b–M.18b of the Madrid Codex and at Yaxchilan, 578
- 11-53. The relationship between footprints and the days of the Maya week, 579
- 11-54. The sky at Sunrise on the night of 25 July AD 926 (Gregorian), showing Cancer (*toloc*) rising in the east and Capricorn setting in the west, 587
- 11-55. The rainmaking almanac on pages D.29b–D.30b of the Dresden Codex, with a transcription and expansion of its calendrical structure, 591
- 11-56. Chac in a ceiba tree, 592
- 11-57. Chac in a basin or tank, 593
- 11-58. The double almanac on pages D.40c–D.41c of the Dresden Codex, with a transcription and expansion of the calendrical structures of both the upper almanac and the lower almanac, 597
- 11-59. The double almanac on pages D.40c–D.41c of the Dresden Codex, 600
- 11-60. Chac paddling a boat and sitting beside *pom* incense, 600
- 11-61. Chac sitting on a skyband and on the roof of a house, 601
- 11-62. Chac hunting, 602
- 11-63. The earliest published line-drawing facsimile of page P.18 of the Paris Codex, 606
- 11-64. The hieroglyphic text and the pictures of the lower God C almanac on pages P.15b–P.18b of the Paris Codex, 608
- 11-65. The remnants of the pictures of the upper God C almanac on pages P.15a–P.18a of the Paris Codex, 609
- 11-66. Schematic representation of the eight most nearly complete numerical series in the lower God C almanac on pages P.15b–P.18b of the Paris Codex, 610
- 11-67. Symbolic variants of “20” used in the God C almanacs on pages P.15a,b–P.18a,b of the Paris Codex, 611
- 11-68. Schematic representation of the eight most nearly complete numerical series in the upper God C almanac on pages P.15a–P.18a of the Paris Codex, 611
- 11-69. Deities seated under skybands and/or in entwined frames and deities walking in or on unknown substances, 614
- 11-70. Deities associated with braziers and houses, 615
- 11-71. Digging sticks and spears, 616
- 11-72. Numerical series considered to represent enumerated offerings in several Mesoamerican codices, 618
- 11-73. Ethnographically recorded offering tables from Mesoamerica, 620
- 11-74. Offering table or altar used during a *loh* ceremony in San Felipe, Yucatan, in August 1982, 622
- 11-75. Location within the *haab* of the iconography of God C in a ceiba tree, assuming that one row of the lower God C almanac (P.15b–P.18b) has a length of 91 days, 625
- 11-76. Location within the *haab* of the iconography of God C in a ceiba tree, assuming that one row of the lower God C almanac (P.15b–P.18b) has a length of 104 days, 626
- 11-77. The central column of page P.18b of the Paris Codex, showing God C holding one offering and facing the numerical series that is considered to represent enumerated offerings on an offering table, 627
- 11-78. The leftmost portion, page M.58c, of the tropical-year almanac in the Madrid Codex, 628
- 11-79. The middle portion, pages M.59c and M.60c, of the tropical-year almanac in the Madrid Codex, 629
- 11-80. The rightmost portion, pages M.61c and M.62c, of the tropical-year almanac in the Madrid Codex, 630
- 11-81. Collocations for fire and wildfire, 633
- 11-82. The leftmost portion, pages D.31a–D.33a, of the spliced table in the Dresden Codex, 639
- 11-83. The middle portion, pages D.34a–D.36a, of the spliced table in the Dresden Codex, 639
- 11-84. The rightmost portion, pages D.37a–D.39a, of the spliced table in the Dresden Codex, 640
- 11-85. Zones I through III of the spliced table in the Dresden Codex, as defined and discussed in the text, 641
- 11-86. The first two ring-number dates in the introduction to the spliced table, in Zone I on page D.31a, 641

- 11-87. The third ring-number date and the truncated initial series date in the introduction to the spliced table, in Zone I on page D.31a, 642
- 11-88. The listing of 20 *tzolkin* days and the right portion of the table of multiples in the introduction to the spliced table, in Zone I on page D.32a, with a transcription of their contents, 643
- 11-89. The left portion of the table of multiples of the spliced table, in Zone I on pages D.31a–D.32a, with a transcription of its content, 644
- 11-90. Stylistic differences in red *tzolkin* coefficients in different parts of the spliced table, 645
- 11-91. Iconographic parallels with the staff-holding figure in Picture 3 of the spliced table, 650
- 11-92. New Year iconography, 651
- 11-93. Head sacrifice, 652
- 11-94. Uayeb and Half Year iconography, 653
- 11-95. Modern hanging device from Ebtun, Yucatan, Mexico, 653
- 11-96. Chac-headed snakes, 653
- 11-97. Torch-wielding dogs and macaw, 654
- 11-98. Model of the first seven intervals in the first three rows of a hypothetical 5 x 208-day version of the spliced table with an entry date of 13 Akbal 1 Xul, 657
- 11-99. Comparison of sequences of drought and rain pictures (Pictures 7 through 10) in the spliced table and the eclipse almanac in the Dresden Codex, 660
- 11-100. The Burner almanac on pages D.33c–D.39c of the Dresden Codex, arranged in rows and columns, 662
- 11-101. Columns 1 through 5 (implicit row 1) of the Burner almanac in the Dresden Codex, 663
- 11-102. Columns 6 through 10 (implicit row 2) of the Burner almanac in the Dresden Codex, 665
- 11-103. Columns 11 through 15 (implicit row 3) of the Burner almanac in the Dresden Codex, 666
- 11-104. Columns 16 through 20 (implicit row 4) of the Burner almanac in the Dresden Codex, 667
- 11-105. The ceremonial platform erected in Chamula in honor of the feast of Saint John in 1982, 668
- 11-106. Construction of the ceremonial platform in preparation for the feast of Saint John in 1982, 668
- 11-107. Alternative references to lunar eclipses, 670
- 11-108. The conjugal almanac on pages D.22c and D.23c of the Dresden Codex, with a transcription and expansion of its calendrical structure, 675
- 11-109. Comparison of representations of Goddess I and the Moon goddess in the Dresden, 677
- 11-110. Comparison of glyphs for Goddess I and the Moon goddess, 677
- 11-111. The almanac on pages M.93a and M.94a of the Madrid Codex, closely parallel to the conjugal almanac on pages D.22c and D.23c of the Dresden Codex, 679
- 11-112. The bird almanac on pages M.26c and M.27c of the Madrid Codex, with a transcription and expansion of the calendrical structure, 680
- 11-113. Back-to-back “bookend” figures, indicators of vernal equinox, 681
- 11-114. Reversal of order of summer solstice and Half Year iconography in codical instruments of the ninth and tenth centuries AD, 682
- 11-115. Summer solstice and flapstaff dancing at Yaxchilan, 687
- 11-116. Lintel 9 at Yaxchilan, showing figures holding flapstaves, 688
 - 12-1. Page P.23 of the Paris Codex, the second page of the zodiacal almanac, 692
 - 12-2. Page P.24 of the Paris Codex, the first page of the zodiacal almanac, 693
 - 12-3. Elements in the skyband of the zodiacal almanac on pages P.23 and P.24 of the Paris Codex, 694
 - 12-4. Paris Codex skybands terminating in heads, 695
 - 12-5. William Gates’s “idealized reconstruction” of page P.23 of the Paris Codex coded to show the colors of the bar-and-dot numbers, 696
 - 12-6. William Gates’s “idealized reconstruction” of page P.24 of the Paris Codex coded to show the colors of the bar-and-dot numbers, 696
 - 12-7. Beasts #1, #2, #3, and #4 of the zodiacal almanac, on page P.24 of the Paris Codex, 700
 - 12-8. Beasts #5, #6, and #7 of the zodiacal almanac, on page P.23 of the Paris Codex, 700
 - 12-9. Depictions of owls in the Dresden and Madrid Codices, 701
 - 12-10. Depictions of owls in the Dresden and Paris Codices, 702
 - 12-11. Almanac on pages D.16c–D.17c of the Dresden Codex, in which six different kinds of birds, three of which are illustrated, are named explicitly in the captions, 702
 - 12-12. Owl collocations in the Dresden and Madrid Codices, 703
 - 12-13. The shark as a zodiacal beast?, 705
 - 12-14. Beasts #8, #9, and #10 of the zodiacal almanac, on page P.24 of the Paris Codex, 706
 - 12-15. Beasts #11, #12, and #13 of the zodiacal almanac, on page P.23 of the Paris Codex, 707
 - 12-16. Animals and other figures from the bas relief skyband on the eastern façade of the Monjas Annex at Chichen Itza, which were considered by Eduard Seler to represent constellations and other celestial bodies, 709
 - 12-17. Celestial imagery in Room 2 of Structure 1 at Bonampak, Chiapas, Mexico, and other Mesoamerican contexts, 716

- 12-18. Presentation of offerings on *katun* pages of the Paris Codex, 719
- 12-19. Linda Schele's model of the Maya zodiac, 721
- 12-20. The Hauberg stela, 722
- 12-21. Stela 1 from Tikal, Guatemala, 724
- 12-22. Sky map for 5:04 a.m. (approximately 60 minutes before Sunrise), 10 November AD 755 (Gregorian), at 20° 30' north latitude, 80° 30' west longitude, showing the positions of the zodiacal constellations Libra (LIB), rising; Cancer (CNC) and western Leo (LEO), at the meridian; and the Pleiades (PLE) in Taurus, setting, 732
- 12-23. Sky map for 5:22 a.m. (approximately 60 minutes before Sunrise), 8 December AD 755 (Gregorian), at 20° 30' north latitude, 80° 30' west longitude, showing the positions of the zodiacal constellations Scorpius (SCO), rising; eastern Leo (LEO), at the meridian; and Orion (ORI), setting, 732
- 12-24. Sky map for 5:36 a.m. (approximately 60 minutes before Sunrise), 5 January AD 756 (Gregorian), at 20° 30' north latitude, 80° 30' west longitude, showing the positions of the zodiacal constellations Sagittarius (SGR), rising; Virgo (VIR), at the meridian; and Gemini (GEM), setting, 733
- 12-25. Sky map for 5:36 a.m. (approximately 60 minutes before Sunrise), 2 February AD 756 (Gregorian), at 20° 30' north latitude, 80° 30' west longitude, showing the positions of the zodiacal constellations Capricornus (CAP), rising; Libra (LIB), at the meridian; and western Leo (LEO), setting, 734
- 12-26. Sky map for 5:17 a.m. (approximately 60 minutes before Sunrise), 1 March AD 756 (Gregorian), at 20° 30' north latitude, 80° 30' west longitude, showing the positions of the zodiacal constellations Aquarius (AQR), rising; Scorpius (SCO), at the meridian; and eastern Leo (LEO), setting, 734
- 12-27. Sky map for 4:51 a.m. (approximately 60 minutes before Sunrise), 29 March AD 756 (Gregorian), at 20° 30' north latitude, 80° 30' west longitude, showing the positions of the zodiacal constellations Pisces (PSC), rising; Sagittarius (SGR), at the meridian; and Virgo (VIR), setting, 735
- 12-28. Sky map for 4:28 a.m. (approximately 60 minutes before Sunrise), 26 April AD 756 (Gregorian), at 20° 30' north latitude, 80° 30' west longitude, showing the positions of the zodiacal constellations Aries (ARI), rising; eastern Sagittarius (SGR), at the meridian; and Libra (LIB), setting, 735
- 12-29. Sky map for 4:13 a.m. (approximately 60 minutes before Sunrise), 24 May AD 756 (Gregorian), at 20° 30' north latitude, 80° 30' west longitude, showing the positions of the zodiacal constellations Pleiades (PLE) in Taurus, rising; Capricornus (CAP), at the meridian; and Scorpius (SCO), setting, 737
- 12-30. Sky map for 4:13 a.m. (approximately 60 minutes before Sunrise), 21 June AD 756 (Gregorian), at 20° 30' north latitude, 80° 30' west longitude, showing the positions of the zodiacal constellations Orion (ORI), rising; Pisces (PSC), at the meridian; and Sagittarius (SGR), setting, 737
- 12-31. Sky map for 4:27 a.m. (approximately 60 minutes before Sunrise), 19 July AD 756 (Gregorian), at 20° 30' north latitude, 80° 30' west longitude, showing the positions of the zodiacal constellations Gemini (GEM), rising; Aries (ARI), at the meridian; and Capricornus (CAP), setting, 738
- 12-32. Sky map for 4:37 a.m. (approximately 60 minutes before Sunrise), 16 August AD 756 (Gregorian), at 20° 30' north latitude, 80° 30' west longitude, showing the positions of the zodiacal constellations Cancer (CNC) and western Leo (LEO), rising; the Pleiades (PLE) in Taurus, at the meridian; and Aquarius (AQR), setting, 738
- 12-33. Sky map for 4:45 a.m. (approximately 60 minutes before Sunrise), 13 September AD 756 (Gregorian), at 20° 30' north latitude, 80° 30' west longitude, showing the positions of the zodiacal constellations eastern Leo (LEO), rising; Orion (ORI), at the meridian; and Pisces (PSC), setting, 739
- 12-34. Sky map for 4:50 a.m. (approximately 60 minutes before Sunrise), 11 October AD 756 (Gregorian), at 20° 30' north latitude, 80° 30' west longitude, showing the positions of the zodiacal constellations Virgo (VIR), rising; Gemini (GEM), at the meridian; and Aries (ARI), setting, 739
- 12-35. Remaining portions of the 13 columns of captions to the zodiacal almanac on pages P.24–P.23 of the Paris Codex; all content between row 2 and the tops of the pages has been effaced, 740
- 12-36. Occurrence of possible name glyphs of constellations (Pleiades through Scorpius) in the zodiacal almanac and intervals separating multiple occurrences of the same glyph, 746
- 12-37. Occurrence of possible name glyphs of constellations (Sagittarius through Pisces, Orion, and Gemini) in the zodiacal almanac and intervals separating multiple occurrences of the same glyph, 747
- 12-38. Scene on pages P.21 and P.22 of the Paris Codex, 748
- 12-39. Remaining portion of the caption on page P.22 of the Paris Codex, 749
- 12-40. Page P.21 of the Paris Codex, 752
- 12-41. The table of day signs on page P.21 of the Paris Codex, 753
- 12-42. Diagrammatic representation of the table of day signs on page P.21 of the Paris Codex, showing the relationships between its columns of days and days tabulated in the zodiacal almanac on pages P.24–P.23, 763

- 12-44. The first three pages, M.65–M.67, of the calendar-round almanac in the Madrid Codex, containing Pictures 1–6 and 17–22 and the accompanying captions and calendrical notations, 769
- 12-45. The middle three pages, M.68–M.70, of the calendar-round almanac in the Madrid Codex, containing Pictures 7–12 and 23–28 and the accompanying captions and calendrical notations, 770
- 12-46. The final three pages, M.71–M.73b, of the calendar-round almanac in the Madrid Codex, containing Pictures 13–16 and 29–33 and the accompanying captions and calendrical notations, 771
- 12-47. Picture 1 of the calendar-round almanac and the accompanying text on page M.65a of the Madrid Codex, 775
- 12-48. Picture 2 of the calendar-round almanac and the accompanying text on page M.65a of the Madrid Codex, 775
- 12-49. Picture 3 of the calendar-round almanac and the accompanying text on page M.66a of the Madrid Codex, 776
- 12-50. A comparison of “Venus in *toloc*” expressions, 777
- 12-51. Picture 4 of the calendar-round almanac and the accompanying text on page M.66a of the Madrid Codex, 778
- 12-52. Picture 5 of the calendar-round almanac and the accompanying text on page M.67a of the Madrid Codex, 778
- 12-53. Picture 6 of the calendar-round almanac and the accompanying text on page M.67a of the Madrid Codex, 779
- 12-54. Example of the passive inflection of *dza* ‘give’ on page M.52c of the Madrid Codex, 779
- 12-55. Picture 7 of the calendar-round almanac and the accompanying text on page M.68a of the Madrid Codex, 781
- 12-56. Picture 8 of the calendar-round almanac and the accompanying text on page M.68a of the Madrid Codex, 781
- 12-57. God A’ seated in a thatched-roof structure gesturing toward an offering that includes three maize glyphs, part of a scene of Uayeb ritual shown on page D.28 of the Dresden Codex, 782
- 12-58. Picture 9 of the calendar-round almanac and the accompanying text on page M.69a of the Madrid Codex, 783
- 12-59. Some examples of “number tree” and “great stone” collocations, 784
- 12-60. Picture 10 of the calendar-round almanac and the accompanying text on page M.69a of the Madrid Codex, 785
- 12-61. Picture 11 of the calendar-round almanac and the accompanying text on page M.70a of the Madrid Codex, 785
- 12-62. Two examples of a name glyph for God Y in the Madrid Codex, 786
- 12-63. Picture 13 of the calendar-round almanac and the accompanying text on page M.71a of the Madrid Codex, 787
- 12-64. The turtle as a constellation and costume elements of God N, 788
- 12-65. Picture 14 of the calendar-round almanac and the accompanying text on page M.71a of the Madrid Codex, 789
- 12-66. Decapitation ritual depicted in the Madrid Codex, 790
- 12-67. Ritual involving headless corpses wrapped in shrouds depicted on pages M.101a–M.102a of the Madrid Codex, 791
- 12-68. Picture 15 of the calendar-round almanac and the accompanying text on page M.72a of the Madrid Codex, 792
- 12-69. Goddess I with maize, 792
- 12-70. Picture 16 of the calendar-round almanac and the accompanying text on page M.72a of the Madrid Codex, 794
- 12-71. An example of *x thup nal* from X Kop Ch'en (Quintana Roo), 795
- 12-72. Picture 17 of the calendar-round almanac and the accompanying text on page M.65b of the Madrid Codex, 795
- 12-73. Picture 18 of the calendar-round almanac and the accompanying text on page M.65b of the Madrid Codex, 796
- 12-74. Picture 19 of the calendar-round almanac and the accompanying text on page M.66b of the Madrid Codex, 796
- 12-75. The canine god Xolotl as Venus personifier spearing a victim on page B.54 of the Borgia Codex, 797
- 12-76. Picture 20 of the calendar-round almanac and the accompanying text on page M.66b of the Madrid Codex, 798
- 12-77. Examples of *yax kim* and *yax kan* collocations, 798
- 12-78. Comparison of “3 *lat*” collocations, 799
- 12-79. Picture 21 of the calendar-round almanac and the accompanying text on page M.67b of the Madrid Codex, 799
- 12-80. Picture 22 of the calendar-round almanac and the accompanying text on page M.67b of the Madrid Codex, 801
- 12-81. Picture 23 of the calendar-round almanac and the accompanying text on page M.68b of the Madrid Codex, 801
- 12-82. Picture 24 of the calendar-round almanac and the accompanying text on page M.68b of the Madrid Codex, 802
- 12-83. Picture 25 of the calendar-round almanac and the accompanying text on page M.69b of the Madrid Codex, 802
- 12-84. Picture 26 of the calendar-round almanac and the accompanying text on page M.69b of the Madrid Codex, 803
- 12-85. Picture 27 of the calendar-round almanac and the accompanying text on page M.70b of the Madrid Codex, 804
- 12-86. Cognate sets of maize “first-fruits” pictures in the calendar-round almanac, 806
- 12-87. Picture 28 of the calendar-round almanac and the accompanying text on page M.70b of the Madrid Codex, 807
- 12-88. Picture 29 of the calendar-round almanac and the accompanying text on page M.71b of the Madrid Codex, 807
- 12-89. Linkage between iconographically similar Pictures 29 and 16 of the calendar-round almanac as specified by the “3 *haab*” distance number, 808
- 12-90. Picture 30 of the calendar-round almanac and the accompanying text on page M.71b of the Madrid Codex, 809

- 12-91. Linkage between iconographically similar Pictures 30 and 17 of the calendar-round almanac as specified by the “7 *haab*” distance number, 810
- 12-92. Picture 31 of the calendar-round almanac and the accompanying text on page M.72b of the Madrid Codex, 811
- 12-93. Picture 32 of the calendar-round almanac and the accompanying text on page M.72b of the Madrid Codex, 811
- 12-94. Picture 33 of the calendar-round almanac and the accompanying text on page M.73b of the Madrid Codex, 812
- 12-95. Distribution in the Gregorian calendar of possible dates in the month of Cumku that would be associated with Picture 28 of the calendar-round almanac in the middle centuries of *baktun* 11, 818
- 12-96. The God P yearbearer almanac on page M.5b of the Madrid Codex, 828
- 12-97. Reading order of the calendrical elements in the God P earbearer almanac, 829
- 12-98. The year-sign almanac on page M.4b of the Madrid Codex, 832
- 12-99. Reading order of calendrical elements in the year-sign almanac, 833
- 12-100. The Throne Inscription on the Palace of the Governor at Uxmal, Yucatan, Mexico, drawn from Désiré Charnay’s plaster casts now at the Peabody Museum, Harvard University, 838
- A-1. Periodicity of co-occurrence of Jupiter retrograde with the ending day of a *katun*; retrograde motion occurs between first stationary (S1) and second stationary (S2), 850
- A-2. Artist’s rendering of the central picture of one of the *katun* pages, P.6, in the Paris Codex, 851
