

Acknowledgments

- 2 Rodney L. Honeycutt, Laurence J. Frabotta, and Diane L. Rowe: Research reported on hystricognath rodents was funded by National Science Foundation Grant DEB 9615163 to RLH.
- 4 Nancy G. Solomon and Brian Keane: We thank the editors for the invitation to participate in this book. Kristen Lucia, Gail Michener, Paul Sherman, and Jerry Wolff provided valuable feedback on a previous version of this manuscript. We also are grateful to Michelle Edwards, Stephanie Kortering, Samantha Lowe, Lisa Walther, and Beth Widen for assistance with references. NGS and BK were supported by NSF DEB-0316818 and NGS was supported by 1 R15 6Mo69409-01 during the preparation of this book chapter.
- 5 Lara S. Carroll and Wayne K. Potts: We would like to thank the editors for substantive comments on an earlier version of this manuscript. This manuscript was written while WKP was supported by NIH (GM39578) and NSF (IBN-9904609) grants.
- 6 Matina C. Kalcounis-Rüppell and David O. Ribble: We would like to acknowledge the assistance of Stacy Huff, Michelle Icenhower, and Adrian Sherman in compiling literature for our review and analysis. Robert Bradley helped us to understand Neotomine-Peromyscine systematics. Comments of Jack Millar, Maarten Vonhof, Eileen Lacey, and two anonymous reviewers improved earlier versions of this manuscript. We thank the editors for their insight, suggestions, and editorial guidance.
- 8 F. Stephen Dobson and Madan K. Oli: We owe special thanks to the editors for suggesting that we review rodent life histories. D. R. Broussard, P. H. Harvey, T. J. Karels, and S. C. Stearns provided excellent comments and suggestions for improvement of the manuscript. FSD's contribution to the chapter was supported by a National Science Foundation grant for research (DEB-0089473).
- 9 Lee C. Drickamer: I thank the many undergraduates, particularly at Williams College, graduate students and undergraduates at Southern Illinois University, and faculty colleagues at those two schools and at Northern Arizona University for their invaluable assistance, discussions, and enthusiasm. Portions of the work in my laboratory and in field settings were supported by grants from the National Institutes of Health and National Science Foundation. I thank the editors for their foresight in organizing this volume and for their diligence in putting it all together.
- 10 Albrecht I. Schulte-Hostedde: I thank the editors for the opportunity to contribute this chapter and for improving it with their insightful comments. Thanks to all who responded to my queries, including T. Best, S. Boutin, J. Hoogland, I. Khokhlova, H. Levenson, and R. Sweitzer. Climate data from weather stations were provided by J. Pither. A. Oey provided valuable assistance.
- 11 Robert S. Sikes: I am grateful for constructive comments on a previous version of this manuscript by T. G. Finley, S. Krackow, P. W. Sherman, and J. O Wolff. This work was supported in part by NSF Grant 9975445.
- 12 R. Boonstra, J. M. Barker, J. Castillo, and Q. E. Fletcher: The Natural Sciences and Engineering Research Council of Canada supported this research. We thank Jim Kenagy for helpful comments on an earlier draft of this chapter.
- 13 Scott Nunes: I thank Jerry Wolff and Steve Dobson for constructive, incisive, and helpful comments on earlier versions of this chapter.
- 14 F. Stephen Dobson: I owe special thanks to the editors for suggesting that I review the genetic properties of social breeding groups. Ron Chesser provided patient instruction on the gene dynamics of social breeding groups during the summers of 1993–1996, and the Savannah River Ecology Laboratory provided support via Visiting Faculty Fellowships in 1993, 1994, and 1996. In 1995, I was an Oak Ridge Institute for Science and Education Research Fellow at SREL. I especially appreciate the support of the director of SREL, M. H. Smith, during these 4 years. R. K. Chesser, N. Perrin, and M. F. Winterrowd provided excellent comments and suggestions for improvement of the manuscript. I also owe special thanks to John Hoogland, who generously made his incredible field data so freely available, and to Dave Foltz, for encouraging analyses on his and John's allozyme data. Preparation of the current manuscript was completed while I was supported by a National Science Foundation grant for research (DEB-0089473).
- 15 Charles J. Krebs, Xavier Lambin, and Jerry O. Wolff: We thank Peter Brown, Grant Singleton, and Alice Kenney for their comments and suggestions on the manuscript.
- 16 J. Thomas Curtis, Yan Liu, Brandon J. Aragona, and Zuoxin Wang: We are grateful to Christie Fowler and

- Mike Smeltzer for critical reading of this manuscript. This work was partially supported by NIH grants HD48462 and HD40722 (JTC), MH67396 (BJA), MH58616 and MH67396 (ZXW)
- 18 Bennett G. Galef Jr.: I thank Paul Sherman for his thoughtful comments on earlier drafts of the manuscript. The author's research described here was supported for 35 years by the Natural Science and Engineering Research Council of Canada.
- 21 Eileen A. Lacey and Paul W. Sherman: The ideas presented in this paper reflect 25 years of collaborative interactions between the authors regarding sociality in rodents. For insights and encouragement along the way we thank R. D. Alexander, J. U. M. Jarvis, M. L. Morton, C. K. Sherman, J. S. Sherman, J. R. Wieczorek, J. O. Wolff, E. Yensen, the Animal Behavior Lunch Bunch at Cornell University, and the many graduate and undergraduate students who have assisted with our field and laboratory studies of subterranean rodents. Our work with social rodents has been supported by the National Science Foundation, the National Geographic Society, Sigma Xi, the Center for Latin American Studies at the University of California, Berkeley, and the College of Agriculture and Life Sciences at Cornell University.
- 22 S. Craig Roberts: I thank Morris Gosling, Paul Sherman, Jerry Wolff, and Sarah Zala for their comments on the manuscript.
- 23 Luis A. Ebensperger and Daniel T. Blumstein: We thank the editors for inviting us to write this chapter, and for comprehensive suggestions, which improved the original manuscript considerably. Comments by Bob Elwood and Stefano Parmigiani also are greatly appreciated. During the writing of this article, LAE was supported by the Centro de Estudios Avanzados en Ecología & Biodiversidad (FONDAP 1501-001) and by a FONDECYT grant No. 1020861.
- 25 Eviatar Nevo: This chapter is based on the research program of speciation and adaptive radiation in Israeli subterranean mole-rats that started in the early 1950s. The subset of aggression studies was initiated in 1975. The *Spalax ehrenbergi* superspecies research program incorporates the extensive Israeli and worldwide collaborations of active students, colleagues, and collaborators of subterranean mammals. The *Spalax* research program has been documented since 1961 in some 280 multidisciplinary scientific publications. Much of the evidence in this chapter stems from the aforementioned collaborations. We acknowledge all participants' contributions with much appreciation.
- I wish to extend my deepest gratitude to my colleagues at the Institute of Evolution, whose generous and devoted help made this chapter possible: Mr. Michael Margulies and Mrs. Robin Permut.
- I also appreciate the continuous financial support of the University of Haifa, Israeli Discount Bank Chair of Evolutionary Biology, the Ancell-Teicher Research Foundation for Genetics and Molecular Evolution, the Israeli Ministries of Science and Absorption, and grants from the Israel Science Foundation, BSF, the Israel Academy of Sciences, and Guggenheim Foundation.
- 26 Donald H. Owings and Richard G. Coss: We are indebted to Eric Charles and the editors for their careful reviews of drafts of this manuscript.
- 27 Daniel T. Blumstein: I thank Alexander Nikolskii for introducing me to the Russian literature on alarm communication and Luis Ebensperger for an introduction to South American rodents; neither is responsible for anticipated omissions. I thank Janice Daniel, Kim Pollard, and my reviewers—Jan Randall and Ron Swaisgood—for constructive comments on previous versions, and Erin Shelly, who found reports of genera of alarm calling rodents that I originally missed. I am *extremely* grateful to Paul Sherman, who went out of his way to improve the clarity of this chapter, and to remind me of the importance of the “limits of nepotism”—a hypothesis that is likely to explain interspecific variation in the adaptive utility of alarm communication and other nepotistic behaviors.
- 28 Hannu Ylönen and Joel S. Brown: We thank the editors for inviting us to join the team of *Rodent Societies*. It was a great honor. For our experiences and journeys into the fascinating world of desert rodents, voles, and the ecology of fear, we owe much to the help, instruction, and good ideas of a number of colleagues and friends, too many to mention by name, but denizens of Fennoscandia, North America, the Middle East, and Australia. We are grateful to them all.
- 31 Jan A. Randall: I am grateful to my Russian collaborators on the gerbil project, especially Kostya Rogovin, who kindly provided references from the Russian literature and constructed table 31.1. I thank all the students who participated in my research on kangaroo rats and gerbils over the years, and Bruce MacEvoy for his support and editing skills. He, Debra Shier, Kostya Rogovin, and Jerry Wolff provided helpful comments on the manuscript. I thank the National Science Foundation, National Institute of Health, National Geographic Society, and the Research and Development Foundation for grant support. This chapter is dedicated to John Eisenberg, who conducted the early studies on the behavior of desert rodents and encouraged me to study them.
- 32 Manuel Berdoy and Lee C. Drickamer: The authors would like to thank J. Galef, A. Hanson, P. Honess, G. Singleton, A. Voight, J. Webster, and S. Wolfensohn for helpful comments on this chapter.

- 33 David W. Macdonald, Emilio A. Herrera, Andrew B. Taber, and José Roberto Moreira: We are grateful to Ruth Feber for considerable help in the preparation of this chapter, and to our many colleagues in the WildCRU who have commented on and encouraged our research.
- 34 Eileen A. Lacey and Luis A. Ebensperger: We thank the editors for inviting us to write this chapter. Figures 34.1–34.4 were compiled by Karen Klitz. During the preparation of this chapter, LAE was supported by the Centro de Estudios Avanzados en Ecología and Biodiversidad (FONDAP 1501-001). The authors' ongoing studies of degus, cururos, and tuco-tucos are supported by funding from the National Science Foundation (DEB-0128857; EAL), the National Geographic Society (EAL and LAE), and by FONDECYT grant No. 1020861 (LAE).
- 35 Karen J. Nutt: I would like to thank the Marshall Commission and Roger Nutt for providing financial support for me while writing this chapter. Thanks also to Paula White, Eileen Lacey, and the members of both LARG and Molecular Ecology at Cambridge University for their continued moral support. I am also grateful to the editors for their kindness, patience, and constructive comments on this chapter. Thanks also to the gundis for making the study of rock-dwelling rodents a truly fascinating and worthwhile experience.
- 36 Chris G. Faulkes and Nigel C. Bennett: We are most grateful for financial support from the following: National Research Foundation (NCB and JUMJ), The University of Pretoria and the Mellon Foundation (NCB), The University of Cape Town and the National Geographic Society (JUMJ), and the Natural Environment Research Council (CGF). Thanks to Jenny Jarvis, Steve Le Comber, and Pippa Faulkes for proofreading and many helpful comments, and to the editors for further suggestions that greatly improved the manuscript.
- 39 Beatrice Van Horne: NatureServe compiled and formatted a ground squirrel custom dataset that was useful in developing the cross-species summarizations.
- Last, Jerry Wolff and Paul Sherman sincerely thank all of the authors for contributing their professional expertise to *Rodent Societies* and for their diligence, patience, and good humor in working with us to complete this anthology. We also thank Janet Sherman for assistance with the index and Christie Henry, Monica Holliday, and Jennifer Howard of the University of Chicago Press and Susan Dodson of Graphic Composition for their support, encouragement, and editorial expertise in bringing this book to fruition.
