
Acknowledgments

This book is based on my long-standing interest in and extensive research on the development of life sciences/biotechnology in China, in the course of which I have incurred debts to individuals and organizations that have assisted me in various capacities. First of all, I would like to thank the interviewees for the study. Some of those involved in China's policymaking on the research and commercialization of agricultural genetically modified organisms (GMOs) took time from their busy schedules to receive me, several more than once. Although most of them are kept anonymous, their perspectives have been helpful in shaping the book.

The project was conceived in 2002 when, as a research fellow at the East Asian Institute, National University of Singapore, I first noticed the reports of imports of genetically modified (GM) soybeans into China. With a small grant from the university (R.348-000-005-112), I undertook preliminary desk research and then initial fieldwork in China in the next couple of years.

In 2010, a grant from the U.S. National Science Foundation (NSF; SES-1115319) made it possible for me to further my research on policymaking pertaining to GMOs in China. The Institutional Review Board at the State University of New York (SUNY) Buffalo, through the introduction of Kathy Barberis at the SUNY Research Foundation, kindly helped with the research ethics clearance to meet a key prerequisite for the grant. In early 2011, I moved from SUNY's Neil D. Levin Graduate Institute of International Relations and Commerce in the United States

to the University of Nottingham in the United Kingdom. With NSF's permission and the help of Thomas Moebus and Kathleen Bardolf at the Levin Institute, I was able to retain the grant awarded to one institution on one continent and use it at another university on another continent. The first draft of the manuscript was written in the second half of 2014 at Nottingham; finalization of the book, starting from the summer of 2015, corresponded to another move, this time to Nottingham's satellite campus in Ningbo, China, on yet another continent. I have thus benefited from the environments and the interactions with and encouragement and support from scholars at several institutions.

In the summer of 2017, a small grant from the Swiss National Science Foundation (IZK0Z1_175248) brought me to Switzerland, where I not only gained a European perspective on GMOs through talking to scholars and professionals there, but also was able to finish most of the final draft. I am especially grateful to Andrea Degen and Jessie Zheng Zhang of EURElations, who facilitated the visit, and Ralph Weber, my host at the Institute for European Global Studies, University of Basel, and his colleague, Cornelia Knab.

I also am very appreciative of the careful reading and critical but constructive comments on the entire draft offered generously and in a timely manner by Richard P. Suttmeier and Lester Ross. Hepeng Jia, a former science journalist in China who once covered GMOs and has been pursuing his Ph.D. in science communication at Cornell University, also took time from his studies to read and comment on several draft chapters.

Several Chinese scholars who have helped the conduct of the research and writing in various capacities happen to have the same last name—Liu. Lijun Liu, then with the Chinese Academy of Agricultural Sciences, not only contributed his expertise on the patenting of GM rice to a paper, now a chapter of the book, but also provided some much needed information timely. Yuxian Liu of Tongji University helped with research leading to the chapter on the newspaper coverage of GMOs. Xuxia Liu of Huazhong Agricultural University helped arrange interviews at her university in the summer of 2012. Meanwhile, Yutao Sun also provided critical help while pursuing his own academic endeavor.

Jonathan R. Cole, my Ph.D. adviser at Columbia University and now a colleague and friend, as well as Richard P. Suttmeier, Denis Fred Simon, and Rich Appelbaum, longtime collaborators and friends, among others, deserve special mention. Over the years, they have always provided professional, emotional, and moral support and encouragement whenever needed.

At Columbia University Press, Anne Routon, then commission editor of Asian studies, saw the value of the book project when it was only a proposal. She and her successor, Caelyn Cobb, waited patiently for delivery of the manuscript. Anonymous reviewers invited by the press read and commented on the proposal and an early draft of the book, providing very critical but encouraging comments whose influence is reflected in the current version.

Last but not least, I would like to thank my wife, Xiaozuo, and my son, Yiyang, for their patience with my research and writing. Without their love, support, understanding, and encouragement, it would have been impossible for me to endure more than a decade for a project like this.

Chapter 7 was originally published as Lijun Liu and Cong Cao, “Who Owns the Intellectual Property Rights to Chinese Genetically Modified Rice? Evidence from Patent Portfolio Analysis,” *Biotechnology Law Report* 33 (2014): 181–192.
