

The Contents.

CHAP. I.

A *Display of the Perfections of Innocence ;
With a conjecture at the manner of Adams
Knowledge.* page 1.

CHAP. II.

*Our decay, and ruines by the fall, descanted on :
of the now scantness of our knowledge.* 10.

CHAP. III.

*Instances of our Ignorance (1) of things with-
in our selves. The nature of the Soul, and its ori-
gine glanc't at, and past by. (1) It's union with
the body is unconceivable : So (2) is its moving
the body consider'd either in the way of Sir K. Dig-
by, Des-Cartes, or Dr. H. More, and the Plato-
nists. (3) The manner of direction of the Spirits as
unexplicable.* 17.

CHAP. IV.

*(4) We can give no account of the manner of
Sensation : Nor (5) of the Nature of the Memo-
ry. It is consider'd according to the Philosophy of
Des-Cartes, Sir K. Digby, Aristotle, and
Mr. Hobbs, and all in-effectual. Some other un-
explicables mention'd.* 27.

CHAP.

The Contents.

CHAP. V.

(6) *How our bodies are form'd, unexplicable. The plastick signifies nothing. The formation of Plants, and Animals unknown, in their principle. Mechanism solves it not. A new way propounded, which also fails of satisfaction. (2) No account is yet given how the parts of matter are united. Some considerations on Des-Cartes his Hypothesis; it fails of solution. (3) The question is unanswerable, whether matter be compounded of divisibles, or indivisibles.* 41.

CHAP. VI.

Difficulties about the motion of a wheel, which admit of no Solution. 54.

CHAP. VII.

Mens backwardness to acknowledge their own Ignorance and Error, though ready to find them in others. The first cause of the shortness of our knowledge, viz. the depth of Verity discomf't of: as of its admixtion in mens opinions with falshood; the connexion of truths. And their mutual dependence. A second reason of the shortness of our knowledge, viz. because we can perceive nothing but by proportion to our senses. 62.

CHAP. VIII.

A third reason of our Ignorance and Error, viz. the impostures and deceits of our Senses. The way to rectifie these mis-informations propounded. Des-Cartes his method the only way to Science. The difficulty of the exact performance. 69.

CHAP.

The Contents.

CHAP. IX.

Two Instances of Sensitive deception. (1) Of the Quiescence of the Earth. Four cases in which motion is insensible, apply'd to the Earth's motion. 75.

CHAP. X.

Another instance of the deceptions of our Senses : which is of translating the Idea of our passions to things without us. In propriety of speech our Senses themselves are never deceived ; prov'd by reason, and the authority of St. Austin. 87.

CHAP. XI.

A fourth reason of our Ignorance and Error, viz. the fallacy of our Imaginations. An account of the nature of that faculty ; instances of its deceptions. Spirits are not in a place. Intellection, Volition, Decrees, &c. cannot properly be ascrib'd to God. It is not Reason that opposeth Faith, but Phancy. The Interest which Imagination hath in many of our Opinions, in that it impresses a persuasion without Evidence. 95.

CHAP. XII.

A fifth reason, the precipitancy of our understandings, the reason of it. The most close engagements of our minds requisite to the finding of truth ; the difficulties of the performance of it. Two instances of our precipitating. 106.

CHAP. XIII.

The sixth reason discours'd of, viz. the interest which our affections have in our Dijudications. The cause why our affections mislead us. Several branches of this mention'd ; and the first, viz. consti-

The Contents.

constitutional Inclination, largely insisted on.
113.

CHAP. XIV.

A second thing whereby our affections engage us in Error, is the prejudice of Custom and Education. A third interest. (4) Love to our own productions.
125.

CHAP. XV.

5. Our affections are engag'd by our reverence to Antiquity and Authority; our mistake of Antiquity; the unreasonableness of that kind of Pedantick Adoration. Hence the vanity of affecting impertinent quotations: the Pedantry on't is derided. The little improvement of Science through its successive derivations, and whence it hath hapned.
136.

CHAP. XVI.

Reflexions on the Peripatetick Philosophy.

The Generality of its reception, no argument of its deserts; the first charge against that Philosophy.
148.

CHAP. XVII.

2. Peripatetick Philosophy is litigious, it hath no settled constant signification of words; the inconveniences hereof. Aristotle intended the cherishing controversies, prov'd by his own double testimony. Some of his impertinent arguings derided. Disputes retard and are injurious to knowledge. Peripateticks are most exercised in the controversial parts of Philosophy, and know little of the practical and experimental. A touch at School-Divinity.
159.

CHAP

The Contents.

CHAP. XVIII.

3. *It gives no account of the Phenomena. Those that are remoter it attempts not; it speaks nothing pertinent in the most ordinary; its circular, and general way of solution; it resolves all things into occult qualities. The absurdity of Aristotelian Hypothesis of the Heavens. The Galaxy is no meteor. The Heavens are corruptible. Comets are above the Moon. The spear of fire derided. Aristotle convicted of several other false assertions.*

169.

CHAP. XIX.

(4.) *Aristotle's Philosophy inept for new discoveries. It hath been the Author of no one invention: It's founded on vulgarities, and therefore makes nothing known beyond them. The knowledge of Natures out-side, confers not to practical improvements: better hopes from the New Philosophy. A fifth charge against Aristotle's Philosophy, it is in many things impious, and self-contradicting; instances of both propounded. The directing all this to the design of the discourse. A caution, viz. that nothing is here intended in favour of novelty in Divinity. The reason why we may embrace what is new in Philosophy, while we reject Novelties in Theologie.*

177, 178.

CHAP. XX.

It's queried whether there be any Science in the sense of the Dogmatist: (1) We cannot know any thing to be the cause of another, but from its attending it; and this way is not infallible, declared by instances

The Contents.

instances, especially from the Philosophy of Des-Cartes. (2) There's no demonstration but where the contrary is impossible. We can scarce conclude so of any thing. Instances of supposed impossibles, which are none. A story of a Scholar that turn'd Gipsy; and of the power of Imagination: Of one mans binding anothers thought, and a conjecture at the manner of its performance. 188, 189.

CHAP. XXI.

Another instance of a supposed impossibility which may not be so. Of conference at distance by impregnated Needles. A way of secret conveyance by sympathized bands; a relation to this purpose. Of the magnetick cure of wounds. (3) We cannot know any thing in Nature, without the knowledge of the first springs of natural motion, and these we are ignorant of. Des-Cartes his Philosophy commended. 202

CHAP. XXII.

(4) Because of the mutual dependence and concatenation of Causes, we cannot know any one without knowing all. Particularly declared by instances. (5) All our Science comes in at our senses, their infallibility inquired into. 213

CHAP. XXIII.

Considerations against Dogmatizing. (1) 'Tis the effect of Ignorance. (2). It argues untamed passions. (3) It disturbs the world. (4) It is ill manners, and immodesty (5) It holds men captive in Error. (6) It betrays a narrowness of Spirit. 224.

CHAP. XXIV.

An Apology for Philosophy. 235.

FINIS.
