Preface	v
1 Introduction	1
I Topology and Multivalued Maps	
2 Multivalued Maps	9
2.1 Notations for Multivalued Maps and Axioms	9
2.1.1 Notations	9
2.1.2 Axioms	11
2.2 Topological Notations and Basic Results	17
2.3 Separation Axioms	24
2.4 Upper Semicontinuous Multivalued Maps	43
2.5 Closed and Proper Maps	52
2.6 Coincidence Point Sets and Closed Graphs	55
3 Metric Spaces	59
3.1 Notations and Basic Results for Metric Spaces	59
3.2 Three Measures of Noncompactness	67
3.3 Condensing Maps	75
3.4 Convexity	84
3.5 Two Embedding Theorems for Metric Spaces	89
3.6 Some Old and New Extension Theorems for Metric Spaces	96
4 Spaces Defined by Extensions, Retractions, or Homotopies	105
4.1 AE and ANE Spaces	105
4.2 ANR and AR Spaces	107
4.3 Extension of Compact Maps and of Homotopies	114
4.4 UV^∞ and R_δ Spaces and Homotopic Characterizations	122
5 Advanced Topological Tools	129
5.1 Some Covering Space Theory	129

5.2	A Glimpse on Dimension Theory	133
5.3	Vietoris Maps	140
II Coincidence Degree for Fredholm Maps		
6	Some Functional Analysis	147
6.1	Bounded Linear Operators and Projections	147
6.2	Linear Fredholm Operators	160
7	Orientation of Families of Linear Fredholm Operators	169
7.1	Orientation of a Linear Fredholm Operator	169
7.2	Orientation of a Continuous Family	178
7.3	Orientation of a Family in Banach Bundles	182
8	Some Nonlinear Analysis	197
8.1	The Pointwise Inverse and Implicit Function Theorems	197
8.2	Oriented Nonlinear Fredholm Maps	203
8.3	Oriented Fredholm Maps in Banach Manifolds	204
8.4	A Partial Implicit Function Theorem in Banach Manifolds	214
8.5	Transversal Submanifolds	220
8.6	Parameter-Dependent Transversality and Partial Submanifolds ..	226
8.7	Orientation on Submanifolds and on Partial Submanifolds	229
8.8	Existence of Transversal Submanifolds	231
8.9	Properness of Fredholm Maps	234
9	The Brouwer Degree	237
9.1	Finite-Dimensional Manifolds	237
9.2	Orientation of Continuous Maps and of Manifolds	248
9.3	The C^r Brouwer Degree	255
9.4	Uniqueness of the Brouwer Degree	261
9.5	Existence of the Brouwer Degree	279
9.6	Some Classical Applications of the Brouwer Degree	293
10	The Benevieri–Furi Degrees	309
10.1	Further Properties of the Brouwer Degree	310
10.2	The Benevieri–Furi C^1 Degree	318

10.3 The Benevieri–Furi Coincidence Degree	324
III Degree Theory for Function Triples	
11 Function Triples	339
11.1 Function Triples and Their Equivalences	341
11.2 The Simplifier Property	355
11.3 Homotopies of Triples	361
11.4 Locally Normal Triples	365
12 The Degree for Finite-Dimensional Fredholm Triples	367
12.1 The Triple Variant of the Brouwer Degree	367
12.2 The Triple Variant of the Benevieri–Furi Degree	380
13 The Degree for Compact Fredholm Triples	391
13.1 The Leray–Schauder Triple Degree	391
13.2 The Leray–Schauder Coincidence Degree	404
13.3 Classical Applications of the Leray–Schauder Degree	407
14 The Degree for Noncompact Fredholm Triples	413
14.1 The Degree for Fredholm Triples with Fundamental Sets	414
14.2 Homotopic Tests for Fundamental Sets	429
14.3 The Degree for Fredholm Triples with Convex-fundamental Sets	437
14.4 Countably Condensing Triples	448
14.5 Classical Applications in the General Framework	456
14.6 A Sample Application for Boundary Value Problems	462
Bibliography	465
Index of Symbols	475
Index	477
